Domestic News

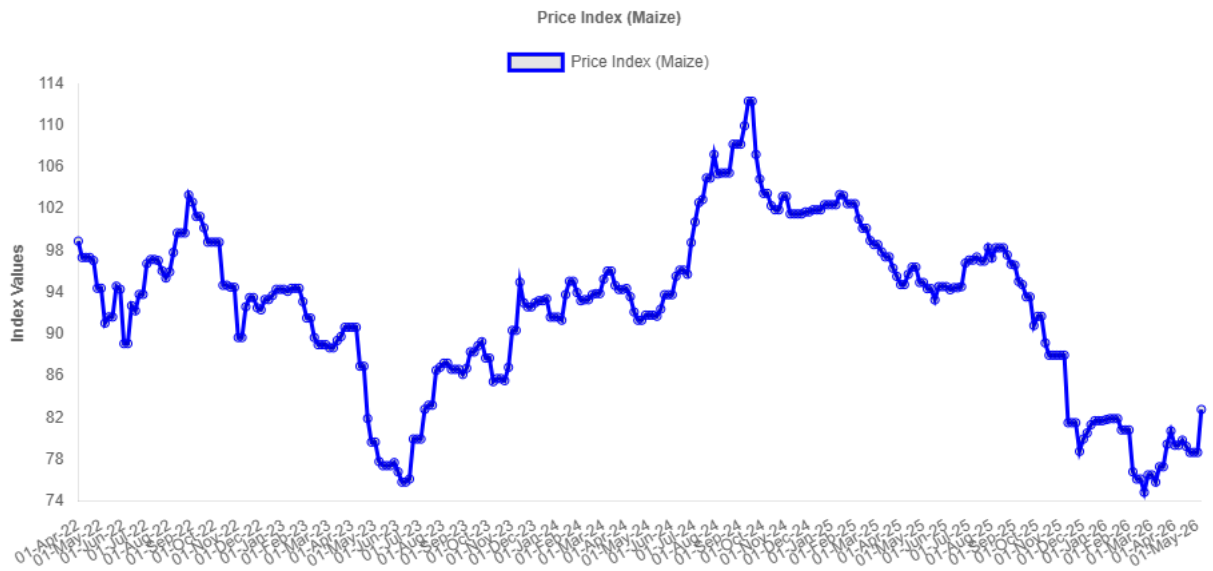

- **Maize prices remained steady to firm in most markets throughout the day. The price of Gulabbagh market is quoted at 20500 INR/Tonne, up by 150 INR.**
- **Himachal Farmers to Pay Higher Prices for Maize Seeds After Subsidy Withdrawal:** Farmers in Himachal Pradesh will have to purchase maize seeds at higher prices this kharif season after the state government discontinued the subsidy on maize seeds. The Agriculture Department has fixed the price of single cross maize seed at ₹125 per kg and double cross seed at ₹100 per kg, compared to last year's subsidised rates of ₹118 and ₹95 per kg respectively, along with a ₹20 per kg subsidy benefit. Seeds will be supplied in five-kilogram packs, and distribution orders have already been issued across districts. Meanwhile, the state recorded 19.4 mm rainfall between 1 and 7 May, 26% above normal, which may support higher maize sowing acreage and improved crop prospects during the upcoming season.
- **Unseasonal Rain Damages Maize Crop in Uttar Pradesh and Bihar:** Unseasonal rain and strong winds have caused major damage to maize crops in parts of Uttar Pradesh and Bihar, increasing concerns among farmers over crop losses and quality deterioration. In Farrukhabad's Nagla Bhika village, heavy rain and storms flattened standing maize fields, while waterlogging disrupted harvesting activities in Kishanganj district's Dighalbank block. Farmers reported that ready-to-harvest maize crops have started lodging due to continuous rainfall, raising fears of lower production and poor grain quality. Wet conditions are also affecting drying and storage of harvested maize, increasing the risk of spoilage. Farmers who invested heavily in cultivation said the weather damage could severely impact their income and livelihood, and demanded immediate crop loss assessment and compensation from authorities.
- **Fire Accidents and Rain Add to Maize Farmers' Distress in Telangana:** Maize farmers in Telangana are facing heavy losses due to repeated fire accidents and unseasonal rain during the harvest season. In districts around Bhainsa, strong winds caused electricity wires passing over fields to collide, triggering fires that destroyed standing maize crops across several villages. Farmers alleged that negligence in maintaining power lines led to large-scale damage to ready-to-harvest fields. At the same time, maize brought to government procurement centres is getting wet due to delayed purchases, shortage of bags and lack of transport vehicles. Farmers said continuous exposure to rain and strong winds is damaging grain quality and increasing financial stress. Affected growers demanded immediate compensation and faster procurement to prevent further crop losses.

International News

- **CBOT: Corn Jul 2026 is down by 0.8 cents, quoted at 467.2 c/bu.**
- **Continuous Rain Threatens Maize Crop in Northern Bangladesh:** Heavy rainfall across northern Bangladesh has submerged large maize-growing areas in the Rangpur region, raising concerns over crop losses and quality damage. Continuous rain over the last five days flooded maize fields in districts including Rangpur, Kurigram and Lalmonirhat, while rising river levels increased fears of early flooding. Farmers reported harvesting maize while standing in water and struggling to dry produce due to the absence of sunshine. Agricultural workers said harvesting operations have slowed sharply, pushing labour costs higher. According to the Department of Agricultural Extension, maize has been cultivated on 1,27,230 hectares across the affected districts. Experts warned that continued rainfall and waterlogging could significantly impact maize quality, production and the regional agricultural economy.
- **Corn Prices Remain Weak Amid Slower US Export Sales:** Corn futures remained under pressure on Thursday, with front-month contracts trading 2–3 cents lower amid weaker market sentiment and slower export demand. The US cash corn price declined by 2.25 cents to $4.24 per bushel, while July 2026 corn futures slipped to $4.66¼ per bushel. According to the latest USDA weekly export sales report, US corn sales for the 2025/26 season stood at 13,62,000 tonnes for the week ended April 30, down 18.1% from the same period last year, although still within market expectations. New crop sales reached 1,22,778 tonnes, near the upper end of trade estimates. Meanwhile, a South Korean importer purchased 1,32,000 tonnes of corn from optional origins, offering limited support to the market as overall price weakness continued.
