Domestic News

- **Himachal Farmers to Pay Higher Prices for Maize Seeds After Subsidy Withdrawal:** Farmers in Himachal Pradesh will have to purchase maize seeds at higher prices this kharif season after the state government discontinued the subsidy on maize seeds. The Agriculture Department has fixed the price of single cross maize seed at ₹125 per kg and double cross seed at ₹100 per kg, compared to last year's subsidized rates of ₹118 and ₹95 per kg respectively, along with a ₹20 per kg subsidy benefit. Seeds will be supplied in five-kilogram packs, and distribution orders have already been issued across districts. Meanwhile, the state recorded 19.4 mm rainfall between 1 and 7 May, 26% above normal, which may support higher maize sowing acreage and improved crop prospects during the upcoming season.
- **Unseasonal Rain Damages Maize Crop in Uttar Pradesh and Bihar:** Unseasonal rain and strong winds have caused major damage to maize crops in parts of Uttar Pradesh and Bihar, increasing concerns among farmers over crop losses and quality deterioration. In Farrukhabad's Nagla Bhika village, heavy rain and storms flattened standing maize fields, while waterlogging disrupted harvesting activities in Kishanganj district's Dighalbank block. Farmers reported that ready-to-harvest maize crops have started lodging due to continuous rainfall, raising fears of lower production and poor grain quality. Wet conditions are also affecting drying and storage of harvested maize, increasing the risk of spoilage. Farmers who invested heavily in cultivation said the weather damage could severely impact their income and livelihood, and demanded immediate crop loss assessment and compensation from authorities.
- **Fire Accidents and Rain Add to Maize Farmers' Distress in Telangana:** Maize farmers in Telangana are facing heavy losses due to repeated fire accidents and unseasonal rain during the harvest season. In districts around Bhainsa, strong winds caused electricity wires passing over fields to collide, triggering fires that destroyed standing maize crops across several villages. Farmers alleged that negligence in maintaining power lines led to large-scale damage to ready-to-harvest fields. At the same time, maize brought to government procurement centres is getting wet due to delayed purchases, shortage of bags and lack of transport vehicles. Farmers said continuous exposure to rain and strong winds is damaging grain quality and increasing financial stress. Affected growers demanded immediate compensation and faster procurement to prevent further crop losses.
- **Telangana Plans Subsidised Maize Distribution Through Ration Shops:** The Telangana government is planning to procure maize from farmers at Minimum Support Price (MSP) and distribute it through ration shops at subsidised rates to support both farmers and consumers. The move is aimed at protecting maize growers from low market prices while ensuring affordable food supply to low-income families. Instead of selling maize in the open market, the government plans to channel the grain through the Civil Supplies Department to reduce the role of middlemen and provide better returns to farmers. The state is also considering the use of maize in welfare hostels, Gurukul schools, and the poultry sector, which could help increase domestic maize consumption and support demand for the crop in Telangana.
- **Continuous Rain Damages Maize Crop in Bihar, Farmers Seek Compensation:** Continuous rainfall in Bihar's Munger district has caused heavy damage to standing maize crops, creating serious concerns among farmers. Waterlogging in several fields has weakened the crop and increased the risk of rotting just when the maize was nearing harvest stage. Farmers said they had invested heavily in cultivation and were expecting a good yield this season, but the unseasonal rain has badly affected the crop and reduced hopes of earning profits. Along with maize, vegetables and other crops have also suffered damage due to excess moisture in the fields. Many farmers, especially those who took loans for cultivation, are now worried about financial losses and repayment of debts. Affected farmers have demanded that the administration conduct a crop loss survey quickly and provide proper compensation for the damage caused by the continuous rainfall.
- **Sweet Corn Farming Improves Farmers' Earnings in Bihar:** Farmers in Bihar's West Champaran district are earning better income through sweet corn cultivation, which is becoming a popular alternative to traditional crops in the region. In the Majhaulia area, many farmers have started growing sweet corn with guidance and technical support from the Krishi Vigyan Kendra (KVK) at Madhopur. Farmers are getting good market prices due to strong demand for sweet corn, helping them earn higher profits in a shorter cultivation period. The crop is also encouraging farmers to adopt diversified farming practices and improve their overall agricultural income. With increasing awareness about the benefits of sweet corn cultivation, more farmers in the district are expected to take up the crop in the coming seasons.
- **Weather Changes and Pest Attack Raise Concern Over Maize Supply:** Maize crops in Jharkhand and Bihar are facing increasing insect attacks due to sudden weather changes and higher humidity, raising concerns over possible production losses. Agricultural experts said the changing weather has created favourable conditions for pests to spread rapidly in maize fields, affecting crop growth and yield prospects. Farmers have been advised to regularly monitor fields and use recommended pesticides and preventive measures to control the infestation. Any significant crop damage could reduce maize arrivals in the market and tighten supplies, while demand from feed, poultry, and ethanol sectors remains steady.
- **Telangana Strengthens Maize Procurement Support:** The Telangana government has strengthened its support for maize farmers by continuing large-scale maize procurement during the current Yasangi season. A State Cabinet sub-panel has decided to expand procurement operations by including jowar alongside maize to protect farmers from low market prices and ensure better returns. The State Agriculture Minister stated that around 278 procurement centres have already been set up, with nearly 550 thousand tonnes of maize procured at Minimum Support Price (MSP) so far. The continued procurement support is expected to stabilise maize prices, support farmer incomes, and maintain steady maize supplies for feed and industrial demand.(Source:TOI)

Domestic News Cont.

- **Bird Flu Outbreak Disrupts Poultry Operations in Maharashtra:** The H5N1 bird flu outbreak in Navapur area of Maharashtra's Nandurbar district has severely disrupted poultry operations, with authorities carrying out large-scale culling to control the spread of the virus. More than 193 thousand birds and over 807 thousand eggs have reportedly been destroyed, while strict containment measures and movement restrictions have been imposed around affected poultry farms. The outbreak has impacted one of western India's important poultry and egg-producing regions, leading to supply concerns in nearby markets and financial losses for poultry farmers.
- **Ethanol Push Gains Momentum as India Eyes 25% Blending Target:** India's ethanol programme is set for a major boost, with the blending target likely to rise to 25%, according to the United States Department of Agriculture. The government has expanded feedstock flexibility from November 1, 2025, allowing ethanol production from all sugarcane-based sources such as juice and molasses, which is expected to significantly increase ethanol supply. Around 3,500 thousand tonnes of sugar may be diverted for ethanol this season, while the Food Corporation of India has also allocated 5,200 thousand tonnes of rice for distilleries, further strengthening production capacity. Ethanol from maize continues to be priced at ₹71.86 per litre, supporting grain-based distilleries. With higher feedstock availability and policy support, ethanol production is expected to expand further, helping reduce fuel imports and strengthen India's biofuel blending programme.
- **Rainfall Brings Relief to Maize Crop in Aligarh, Uttar Pradesh:** In Uttar Pradesh, farmers in Aligarh district have got relief after recent rainfall, as maize crops were earlier facing stress due to heat and lack of moisture. Maize is grown on about 18,572 hectares in the district, making it an important crop this season. The rainfall has improved soil moisture, which is helpful for germination and early growth of the crop. Farmers said the rain has improved crop condition, reduced the need for irrigation, and helped lower costs. Since maize needs good moisture in the beginning stages, the rainfall has supported better plant development. With improved crop condition, the overall supply outlook of maize may increase, which can help meet market demand in the coming months. Farmers are now expecting good yields if favourable weather continues.(Source: Hindustan)
- **India's Summer Maize Sowing Rises to 1,000 Thousand Hectares:** As of May 1, 2026, the Ministry of Agriculture & Farmers Welfare reported a notable increase in summer maize sowing across India, with the total area reaching 1,000 thousand hectares, compared to 850 thousand hectares during the same period last year. The expansion in sowing area indicates growing farmer interest in maize cultivation, supported by favourable weather conditions and better market prospects. The increase in acreage is expected to boost overall maize production in the upcoming season, strengthening supply in domestic markets. Higher sowing also reflects a gradual shift towards crops like maize, which require relatively less water compared to traditional crops, thereby supporting sustainable agricultural practices while helping meet rising demand from feed and industrial sectors.
- **Maize Gains Focus in Punjab as Government Offers Incentives for Crop Shift:** Maize cultivation is gaining strong policy support in Punjab as the government encourages farmers to shift from paddy to maize under a crop diversification programme. To promote maize as a sustainable and profitable option, farmers are being offered financial assistance of ₹17,500 per hectare, making maize more attractive compared to traditional paddy farming. The initiative, expanded to 16 districts for the 2026–27 season, aims to increase maize acreage and ensure better water management, as maize requires significantly less water. With structured payments and monitoring systems in place, maize is being positioned as a key crop for improving farm income while supporting long-term agricultural sustainability in the state. (Sources: TOI)
- **Maize Prices Rise in Khagaria Mandi Amid Lower Arrivals:** Maize prices have increased in Khagaria mandi of Bihar over the past week due to a decline in arrivals caused by ongoing rainy conditions. Traders reported that reduced supply in the market has pushed maize prices upward, while other commodities have remained mostly stable. However, this price rise is considered temporary, as it is mainly driven by short-term supply shortages. Market experts indicated that once weather conditions improve and arrivals increase, maize prices may soften again. The current situation reflects how weather disruptions are directly impacting maize supply and price trends in the region.
- **Heavy Rain and Storms Destroy Maize Crop in Bihar:** Continuous storms and heavy rainfall over the past week have severely damaged maize crops in Mirganj and nearby rural areas, including Kajha Panchayat in Bihar. Strong winds have uprooted standing maize plants, while continuous rain has caused waterlogging, leaving fields submerged and crops rotting. Large areas of maize fields that were close to harvest have now been completely damaged, resulting in heavy losses. Maize, being the main cash crop in the region, has suffered extensive destruction, impacting farmers' expected income. Many farmers had taken loans and invested heavily in cultivation, but the sudden weather impact has pushed them into financial stress. Farmers have demanded that the Agriculture Department carry out a quick damage assessment and provide compensation at the earliest, as delays in support may further worsen their situation.

International News

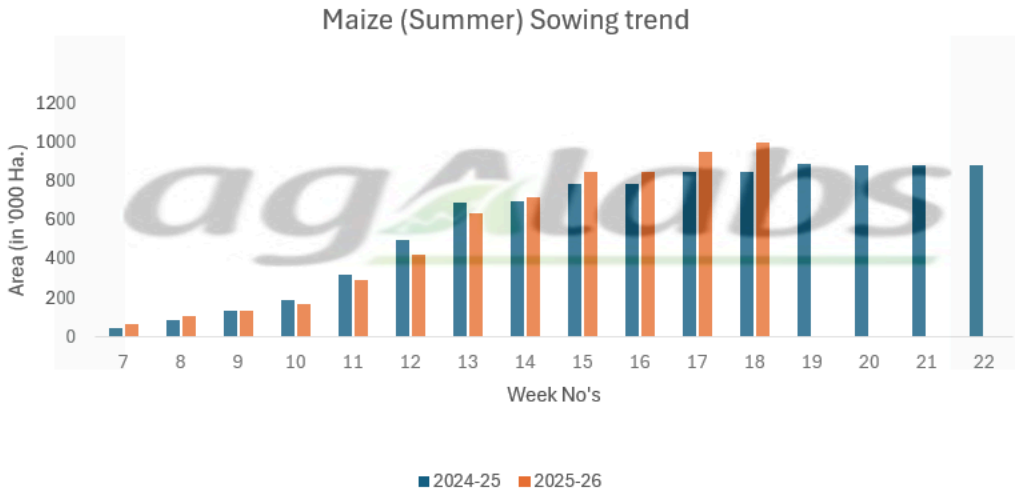

- **CBOT: Corn Jul 2026 is down by 0.8 cents, quoted at 467.2 c/bu.**
- **Continuous Rain Threatens Maize Crop in Northern Bangladesh:** Heavy rainfall across northern Bangladesh has submerged large maize-growing areas in the Rangpur region, raising concerns over crop losses and quality damage. Continuous rain over the last five days flooded maize fields in districts including Rangpur, Kurigram and Lalmonirhat, while rising river levels increased fears of early flooding. Farmers reported harvesting maize while standing in water and struggling to dry produce due to the absence of sunshine. Agricultural workers said harvesting operations have slowed sharply, pushing labour costs higher. According to the Department of Agricultural Extension, maize has been cultivated on 1,27,230 hectares across the affected districts. Experts warned that continued rainfall and waterlogging could significantly impact maize quality, production and the regional agricultural economy.
- **Corn Prices Remain Weak Amid Slower US Export Sales:** Corn futures remained under pressure on Thursday, with front-month contracts trading 2–3 cents lower amid weaker market sentiment and slower export demand. The US cash corn price declined by 2.25 cents to $4.24 per bushel, while July 2026 corn futures slipped to $4.66¼ per bushel. According to the latest USDA weekly export sales report, US corn sales for the 2025/26 season stood at 13,62,000 tonnes for the week ended April 30, down 18.1% from the same period last year, although still within market expectations. New crop sales reached 1,22,778 tonnes, near the upper end of trade estimates. Meanwhile, a South Korean importer purchased 1,32,000 tonnes of corn from optional origins, offering limited support to the market as overall price weakness continued.
- **Kenya's Maize Imports Rise Sharply After Duty-Free Yellow Maize Policy:** Kenya's maize imports increased by 51.4% in 2025 after the government opened a duty-free import window for yellow maize to support the animal feed industry and stabilise domestic maize prices. According to the 2026 Economic Survey, maize imports rose to around 468 thousand metric tonnes as the country continued to rely on external supplies to meet growing demand. The policy allowed feed manufacturers to import yellow maize without the usual high import duty, helping reduce pressure on locally available white maize used for human consumption. Despite a slight increase in domestic maize production during the year, local supplies remained insufficient to fully meet demand from households and the feed sector. The sharp rise in imports highlights Kenya's continued dependence on imported maize to balance supply gaps and manage food and feed prices in the country.
- **Ukraine Strengthens Position as Key Corn Supplier to Europe:** Ukraine is once again becoming an important corn supplier for the European Union as several European countries increase imports to meet feed demand. Countries such as Spain, Italy, Greece, and the Netherlands are actively purchasing Ukrainian corn due to concerns over lower corn production and possible supply shortages in parts of Europe and other major producing regions. Strong demand from European buyers has supported Ukrainian corn prices and export activity. The European Union continues to rely heavily on imported corn for its livestock and poultry sectors, making Ukraine a key supplier for the region in the coming season.
- **Ukraine's Corn Exports Rise in April Amid Strong Global Demand:** Ukraine increased its corn exports to 2.7 million tonnes in April 2026, up 8% from March, supported by strong demand from Mediterranean and Middle Eastern buyers despite competition from South American supplies. Total corn exports during October 2025 to April 2026 reached 15.9 million tonnes, with Turkey emerging as the largest buyer, followed by Italy, Spain, Tunisia, Israel, Libya, the Netherlands, and South Korea. The strong export pace reflects steady global demand for Ukrainian corn, while active buying interest continues to support international market sentiment and corn movement into feed and industrial sectors.
- **US Ethanol and Distillers Grains Exports Increase in March 2026:** The United States recorded strong growth in ethanol and distillers grains exports during March 2026, reflecting steady global demand from fuel and feed markets. According to USDA FAS data, US ethanol exports rose to 217.8 million gallons in March, higher than 209.9 million gallons in February and well above 195.8 million gallons exported a year earlier. Canada remained the largest buyer, followed by the Netherlands and the Philippines. The value of ethanol exports increased to $488.1 million, while first-quarter exports reached 639.7 million gallons valued at $1.4 billion, compared with 532.6 million gallons worth $1.1 billion during the same period last year. Meanwhile, distillers grains exports climbed to 1.0 million metric tonnes in March from 919.9 thousand tonnes in February, supported by demand from major buyers such as Mexico, Indonesia, and South Korea. The higher exports indicate firm international demand for ethanol and feed products, which continues to support US corn consumption and overall market sentiment.
- **Nigeria Can Cut Ethanol Imports Using Cassava:** Nigeria can reduce its 300–350 million litres of ethanol imports by using its large cassava production, according to the Nigeria Cassava Investment Accelerator. The country needs about 400 million litres of ethanol, but most of it is imported even though it produces over 60 million tonnes of cassava each year. The report says converting just 1.8–2.0 million tonnes of cassava (around 3% of total output) can replace imports. However, this will need better processing plants, proper supply systems, and investment. With the right support, Nigeria can meet its own ethanol demand and also increase farmers' income.

International News cont.

- **Brazil's Corn Ethanol Clears Key IMO Step for Marine Fuel Use:** Brazil has achieved a major milestone as its corn-based ethanol cleared an important regulatory step from the International Maritime Organization, strengthening its position in supplying cleaner fuels for global shipping. The approval means Brazil's second-crop corn ethanol is the first marine-compatible biofuel to have its carbon footprint officially defined and accepted by the IMO, giving the country an edge in the emerging market for low-emission ship fuels. This development is expected to support Brazil's growing biofuel industry and open new opportunities in the maritime sector as the world moves toward reducing shipping emissions.
- **Zero Export Duty Keeps Russian Maize Competitive in Global Market:** The export duty on maize from Russia will stay at zero for the third week in a row from May 6, which helps keep its prices competitive in the global market. With no export tax, Russian maize is easier and cheaper for other countries to buy, supporting steady demand. The maize price has slightly increased to $220.3 per tonne compared to $217.5 earlier, showing a small rise. This zero-duty policy will continue till May 13 and is expected to keep maize supply stable in the global market while supporting exports from Russia.
- **Brazil Plans Higher Ethanol Blending to Boost Biofuel Production:** Brazil is planning to increase the ethanol blending in petrol from 30% to 32%, according to an announcement by the country's President, with a final decision expected soon after review by the Ministry of Mines and Energy. This move is aimed at increasing ethanol use and helping the country become self-sufficient in fuel, reducing the need for petrol imports. A higher ethanol blend is expected to push more sugarcane towards ethanol production instead of sugar, with estimates showing over half of the cane crop may be used for biofuel this season. At the same time, expansion of corn-based ethanol production will further support overall output, which is expected to reach around 44 to 44.5 billion litres. The decision comes at the start of the harvest season, allowing producers to adjust their production plans, and is expected to strengthen the ethanol industry while supporting long-term energy security.

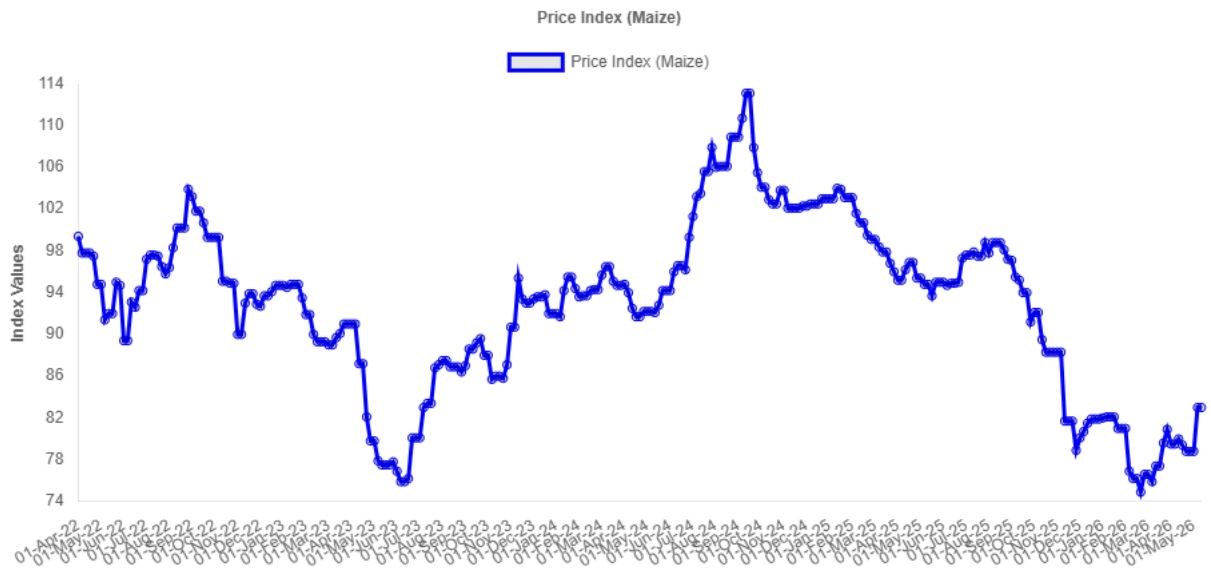

Sowing Progress

As of 01st May 2026, the Ministry of Agriculture & Farmers Welfare reported that India's Summer maize sowing area increased to 1000 thousand hectares hectares, compared from 850 thousand hectares sown during the corresponding period in last year.

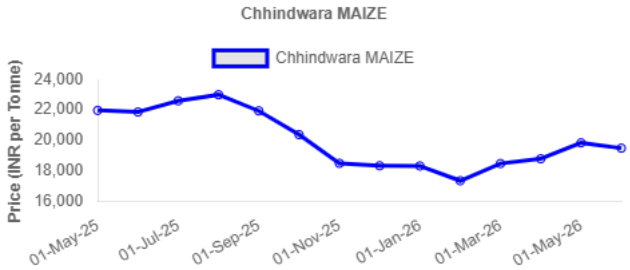

Price Index

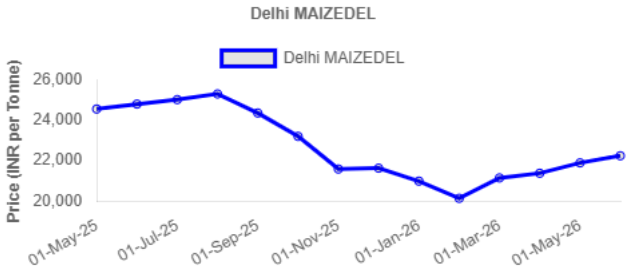

India's Maize Price Index: Average Price of Major Origin (Base Date: 1st April 2022)

Carryover stocks	307	306	1	290

WASDE

According to the WASDE April Report:

- **Global corn production is increased, supported by higher output in India, South Africa, Indonesia, and Russia, though partly offset by a decline in Uruguay.**
- **India's corn production is higher due to an increase in sowing area based on government data.**
- **South Africa's production is higher due to increased area and better yields supported by above-average rainfall.**
- **Corn exports for 2025/26 are projected to increase for India, Russia, and South Africa, while declining for Pakistan and Uruguay.**
- **Corn imports are expected to rise in Turkey and Morocco, while declining in Iran and Indonesia.**
- **Global corn ending stocks are estimated at 294.8 million tonnes, up by 2.1 million tonnes.**
- **Higher global stocks are mainly due to increases in India, South Africa, and Brazil.**
