International News

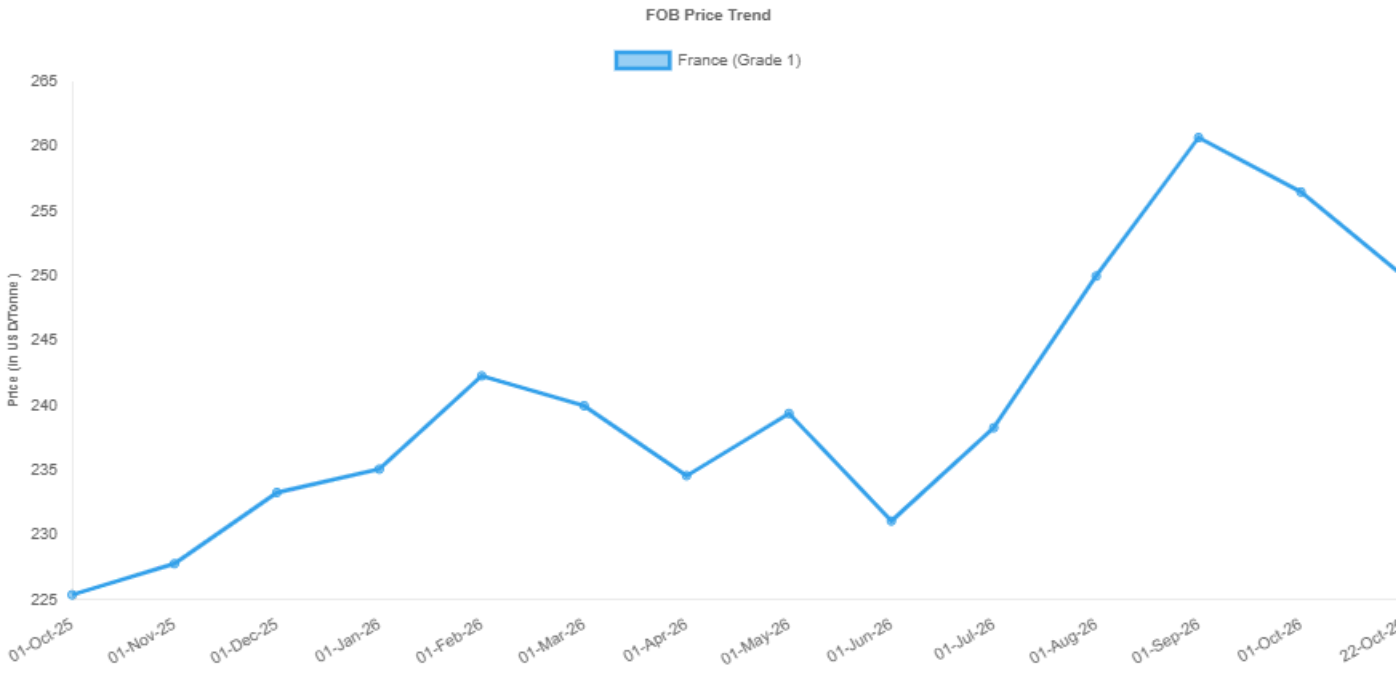

- **Ukraine Feed Barley Prices Decline Amid Weak Export Demand:** Ukraine's feed barley prices are under pressure due to weak export demand, ample supplies and competition from cheaper feed corn and sunflower cake. Purchase prices have fallen to UAH 5,000–5,500 per tonne, while high transportation costs are limiting shipments to ports. Ukraine exported 473 thousand tonnes of barley during the 2026/27 marketing year so far, compared with 1.03 million tonnes during the same period last season. Declining feed barley prices in Europe and lower prices at international tenders are further weakening market sentiment.
- **UK Barley Export Potential to Fall Sharply in 2026/27:** The UK's barley exportable surplus is forecast to decline by 67% to 336 thousand tonnes in the 2026/27 marketing year due to lower production and drought-hit yields. Barley production is estimated at 5.5 million tonnes, down 14% year-on-year, while domestic consumption is expected to remain stable. To meet demand, barley imports are forecast to increase by 17% to 250 thousand tonnes. Lower domestic supplies and steady feed demand are expected to reduce the UK's export potential and affect global barley trade flows.
