Executive Summary

This week, the domestic maize market witnessed an overall increase in prices. Strong demand from the poultry and ethanol industries supported good-quality maize prices in Maharashtra, particularly in premium markets such as Sangli and Poyang. Prices may rise further in the coming months if industrial demand remains strong. However, global market weakness, fund selling, weak US exports, and fresh crop arrivals with higher moisture levels in Madhya Pradesh continue to influence market prices.

Maize Summary Table:

Particulars	Latest	+/- Change
Mandi Prices (INR/Tonne)		
Sangli	30973	1124
Chhindwara	25750	350
Delhi	26500	-250

Price Influencing Factor

S.No.	Factors	Current Status	Expected Impact on Prices
1	Sowing Acerage ('000.ha)	Low(9354 Vs 9634)(Kharif-2026 Vs Kharif 2025)	Bullish
2	Crop Condition(Kharif 26-27)	Below average(Affected by low rainfall in key maize producing region)	Bullish
3	Yield(Kharif 26-27)	Yield is expected to be lower this year due to deficient rainfall in key maize-producing regions.	Bullish
4	Production(Kharif 26-27)	This year's maize production is expected to be lower than last year's due to drought conditions prevailing in several talukas across Maharashtra and Karnataka.	Bullish
5	Area('000.ha)	High (1000 Vs 850)(Summer-2025 Vs Summer-2024)	Bearish
6	Arrivals ('000 tonnes) (Oct-Sep)	High(1338 Vs 530)	Bearish
7	Import ('000.Tonnes)	High (2 Vs 1.2)(Aug-26 Vs Aug-25)	Bearish
8	Export ('000.Tonnes)	Low (35 Vs 46.6)(Aug-26 Vs Aug-25)	Bearish
9	Current Price Trend	Major markets witnessed an upward trend, with Gulabbagh recording a 4.1% week-on-week increase and Chhindwara registering a 1.4% rise.	Bullish
10	WPI	High(114.6 Vs 112.8)(Sep 2026 Vs Aug 2026)	Bullish
11	Inflation	High(3.3 % Vs -0.5 %)(Sep 2026 Vs Aug 2026)	Bullish
12	MSP (INR/ Tonne)	High(24100 Vs 24000)(2026-27 Vs 2025-26)	Bullish
13	Substitute Crops	Upward	Bullish
14	Rainfall Status	India recorded 56% below-normal post-monsoon rainfall during the period from 1 October to 23 October.	Bullish
15	Rainfall Outlook	Above-normal rainfall is expected in Karnataka, Andhra Pradesh, and Tamil Nadu, which could disrupt harvesting activities and delay crop operations.	Bullish
16	Temperature Outlook	Normal temperatures are expected across major Kharif maize-growing regions.	Bullish
17	Currency (INR vs USD)	Slight Weak(95)(W-o-W)	Bearish
18	Price Seasonality	Downward(Oct. Avg.)	Bearish

S.No.	Factors	Current Status	Expected Impact on Prices
19	Feed Raw Material Prices	Downward (W-o-W)	Bearish
20	Egg price	Upward(W-o-W)	Bullish
21	Competiting crops	Upward(W-o-W)	Bullish
22	International Price Trend(CME)	Downward(Dec-2026)(W-o-W)	Bearish
23	Geopolitical Condition	Uncertain(US-Iran conflict concerns and Black-Sea tension)	Bullish
24	Global Production Outlook(in Mln Tonnes)	Low(1293 vs 1330)(2026-27 Vs 2025-26)	Bullish

Domestic News

- **Throughout the week, maize prices remained bullish in most of the market, with Gulabbagh market quoted at 27850 INR per Tonne.**
- **Madhya Pradesh Leads Maize Arrivals from 1–21 October 2026:** India's maize arrivals totalled approximately 1,080.9 thousand metric tonnes during 1–21 October 2026. Madhya Pradesh led with 547.8 thousand tonnes, followed by Karnataka at 239.6 thousand tonnes and Rajasthan at 122.7 thousand tonnes. Uttar Pradesh and Maharashtra recorded 66.3 thousand tonnes and 56.5 thousand tonnes, respectively. The top three states accounted for around 84% of total arrivals, highlighting the concentration of maize supplies in key producing regions.
- **Water Shortage and Rising Feed Costs Pressure Pune's Poultry Market:** Water shortages and rising production costs are forcing poultry farms in Pune to scale down operations, potentially tightening chicken and egg supplies in local markets. Higher feed costs, particularly for maize, are squeezing farmers' margins, while reduced production could support poultry product prices. The situation highlights the impact of water scarcity and rising feed expenses on poultry market supply and profitability.
- **Namakkal Egg Procurement Prices Rise to ₹5.70 per Egg:** Egg procurement prices in Namakkal increased to ₹5.70 per egg on 21 October 2026, following a 10-paise rise as demand recovered after the Tamil month of Purattasi. Prices have increased by 20 paise over two days, reversing the prolonged period of subdued prices during September. However, rising poultry feed and production costs continue to pressure farmers' margins, with production costs estimated at around ₹6 per egg. Improved seasonal demand and higher operating costs are expected to keep the market firm in the near term.
- **Shift to Maize Ethanol May Increase OMC Costs:** Oil marketing companies (OMCs) could incur an additional cost of Rs 813 crore for every 100 crore litres of ethanol shifted from B-heavy molasses to maize. Maize-based ethanol costs Rs 68.86 per litre, compared with Rs 60.73 for B-heavy molasses ethanol. The government has excluded sugarcane juice, sugar syrup and B-heavy molasses from the 2026-27 ethanol tender to protect domestic sugar supplies. This shift could increase maize demand from the ethanol industry, intensify competition with poultry feed and other industries, and put pressure on OMCs' marketing margins.
- **Drought-Related Maize Crop Losses May Tighten Supply in Maharashtra:** Drought and inadequate rainfall have damaged maize crops across 229 thousand hectares in 10 drought-hit talukas of Nashik, Maharashtra. Overall, crop damage has been reported across more than 507 thousand hectares of farmland, with maize emerging as the worst-affected crop due to inadequate rainfall during critical growth stages. These losses could reduce maize availability, affect mandi arrivals and put upward pressure on local prices. Lower production may also intensify competition among poultry feed, starch and ethanol manufacturers for available supplies. The overall market impact will depend on the extent of crop losses and maize availability from other regions.
- **Gujarat Kharif Maize Acreage Ends at 272.3 Thousand Hectares:** Gujarat's kharif maize sowing stood at 272.3 thousand hectares as of October 19, 2026, down 3.1% from 281.0 thousand hectares last year and 3.8% below the three-year normal of 283.2 thousand hectares. Middle Gujarat accounted for the largest share at around 214 thousand hectares, led by Dahod (124.7 thousand hectares), Panchmahal (54.6 thousand hectares) and Mahisagar (22.0 thousand hectares). Lower acreage may slightly tighten maize supply from Gujarat, while final availability will depend on crop yields, harvest-time weather and demand from the feed and starch industries.
- **Maize Cultivation Expands in Rohilkhand as Ethanol Demand Grows:** Farmers in Uttar Pradesh's Rohilkhand region are increasingly shifting towards maize cultivation due to rising demand from the ethanol and animal feed industries. Badaun district has recorded a significant increase in maize acreage, supported by growing market opportunities and improved transportation facilities. Meanwhile, agricultural institutions are encouraging farmers in Bareilly to expand maize cultivation and adopt modern farming practices to improve productivity and income.
- **Rising Ethanol Demand Tightens Maize Supply for Feed and Starch Industries:** Drought-related supply constraints and rising demand from ethanol manufacturers are tightening maize availability in India, increasing competition among ethanol, poultry feed and starch industries. Industry associations have urged the government to review procurement policies to ensure adequate grain supplies across sectors. Concerns have also emerged over the 2026-27 ethanol procurement tender, which excludes sugar-based ethanol from the initial round and reduces the incentive for maize-based ethanol by Rs 3 per litre. Poultry industry representatives have warned that increasing maize diversion towards ethanol could raise feed costs and affect availability for livestock industries. The situation highlights the need to balance ethanol production targets with the raw material requirements of the food, feed and industrial sectors.
- **Fall Armyworm Attack Raises Concerns Over Maize Supply in Tamil Nadu:** Fall armyworm infestations in maize-growing areas of Dindigul district, Tamil Nadu, have raised concerns over crop yields and local maize availability. Poor rainfall, water shortages and high temperatures have already affected cultivation, while pest attacks continue to threaten crop development. If the infestation spreads, reduced yields could tighten local supplies and affect market arrivals in the coming months. However, the overall impact on maize prices will depend on the extent of crop damage and supply conditions in other producing regions.
- **Reduction in Incentive Lowers Effective Price of Maize-Based Ethanol to ₹68.86/Litre:** Oil Marketing Companies (OMCs) have issued a 1,100 crore litre ethanol tender for ESY 2026–27, reducing the incentive for maize-based ethanol by ₹3 per litre, from ₹5.79 to ₹2.79 per litre. With the base price unchanged at ₹66.07 per litre, the effective price of maize-based ethanol has declined from ₹71.86 to ₹68.86 per litre. Although maize-based ethanol continues to receive a higher effective price than ethanol produced from other feedstocks, the reduction in incentives could squeeze production margins for distilleries and potentially moderate maize demand from the ethanol sector, depending on procurement allocations and the availability of alternative feedstocks.

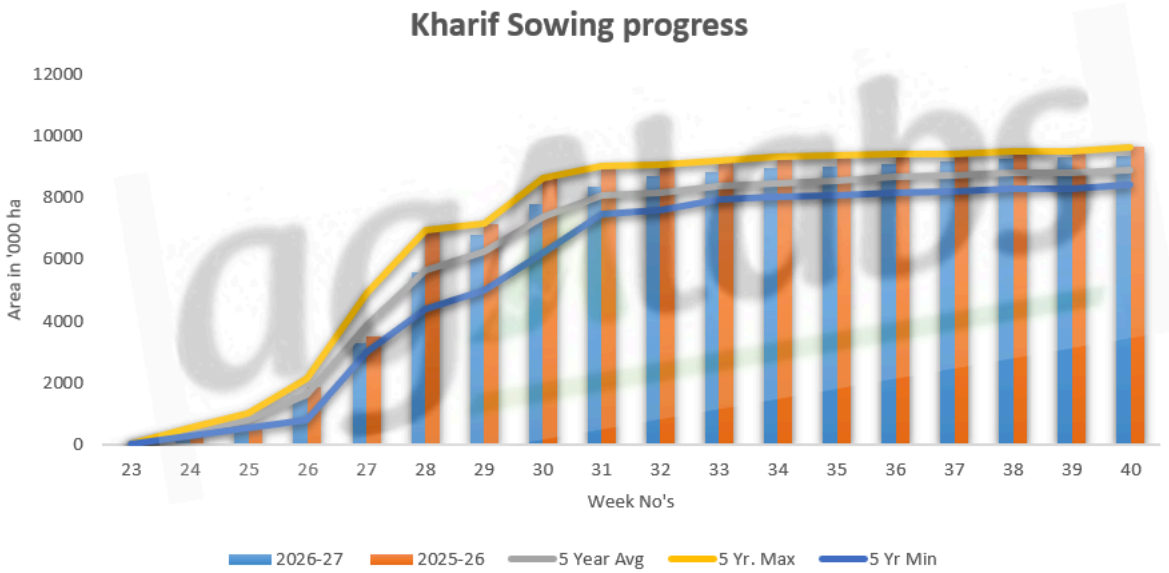

- **Heavy Rainfall Damages Maize Crop in Hardoi, Uttar Pradesh:** Heavy rainfall and flooding have damaged maize and other crops in parts of Hardoi district, Uttar Pradesh, raising concerns over crop yields and farm incomes. Prolonged waterlogging could further affect maize crop development and quality, potentially reducing production in the affected areas. From a market perspective, crop losses may affect local maize arrivals and availability, depending on the extent of the damage.
- **Rising Feed Costs Lead to 15% Losses for Poultry Farmers:** Poultry farmers are facing losses of around 15% due to a sharp rise in feed costs. Maize prices have increased by 8%, while prices of mustard meal, rice bran meal and corn DDGS have also risen significantly. Higher prices of these key feed ingredients are increasing production costs and putting pressure on poultry farmers' profit margins. The rising cost of feed is also creating concerns over maize affordability for the poultry industry, especially as the ethanol sector competes for the same supplies. The situation could affect feed demand and increase pressure on poultry producers if feed costs remain high.

International News

- **Zimbabwe Increases South African Maize Imports Amid El Niño Drought Concerns:** Zimbabwe imported 17.18 thousand tonnes of maize from South Africa during the week ended 9 October 2026, accounting for 49.8% of South Africa's total maize exports of 34.47 thousand tonnes. The shipment included 15.12 thousand tonnes of white maize and 2.06 thousand tonnes of yellow maize. Since May 2026, Zimbabwe's maize imports from South Africa have reached 153.05 thousand tonnes as the government strengthens strategic grain reserves amid concerns over a potential El Niño-induced drought. South African maize has an indicative import-parity price of US$391/tonne, compared with US$364/tonne for locally traded maize in Zimbabwe.
- **Brazil May Resume U.S. Ethanol Imports in January 2027:** Brazil could resume U.S. ethanol imports through Suape port in January 2027 as lower U.S. prices and higher domestic prices improve import economics during the sugarcane off-season. Despite an 18% import tariff, U.S. ethanol may remain competitive in Northeast Brazil. Meanwhile, Brazil's ethanol exports declined 17% year-on-year to 1.03 billion litres in 2026 to date. Renewed imports could increase competition for domestic producers and influence regional ethanol prices.
- **EU Corn Imports Expected to Rise in MY 2026/27:** The European Union's corn imports are expected to increase in MY 2026/27 due to declining domestic production, which is forecast to reach its lowest level since 1994. Lower output is increasing dependence on supplies from North and South America and the Black Sea region, while EU corn exports are expected to decline. Despite rising import demand, global corn prices have fallen due to higher-than-expected US grain stocks and improved production forecasts. Increased EU import requirements could create export opportunities for major suppliers, although ample global supplies and strong competition may limit price gains.
- **Brazil Increases Ethanol Blending to Boost Corn-Based Ethanol Demand:** Brazil has temporarily increased its mandatory ethanol blending rate in gasoline from 30% to 32% to reduce dependence on gasoline imports and support domestic biofuel production. The revised mandate is expected to increase ethanol demand, benefiting the country's corn-based ethanol industry. Brazil is also considering raising the blending rate further, which could encourage additional investment in ethanol production capacity. Higher demand for corn-based ethanol may increase maize consumption and strengthen competition between the ethanol and animal feed industries.
- **Poland Corn Prices Rise Amid Harvesting Delays and Tight Supplies:** Corn purchase prices in Poland are rising due to delays in harvesting the new crop and limited domestic grain supplies. High moisture levels are preventing farmers in some regions from harvesting on time, despite generally strong yields. The average price of wet corn increased by PLN 8 per tonne over the week to PLN 644 per tonne, while dry corn averaged PLN 939 per tonne. Strong competition among buyers for available supplies is supporting wet corn prices. Similar harvesting difficulties in the United States and Ukraine, along with logistical constraints, are adding support to the wider European corn market.
- **China's Large Corn Harvest Expected to Put Pressure on Prices:** China's corn market is facing pressure as the new crop enters the market and supplies increase. Traders and feed manufacturers are buying cautiously, expecting prices to fall further during the main harvest period. Weak profits in the livestock sector and limited demand from corn-processing companies are also slowing purchases. Corn prices may remain under pressure due to higher supplies and weak demand, while government purchases and limited availability of good-quality corn could prevent a sharp decline. A larger domestic harvest may also reduce China's demand for imported corn.
- **Brazil's Corn Production Forecast to Rise 2.4% to 148 Million Tonnes in MY 2026/27:** Brazil's corn production is forecast to increase by 2.4% year-on-year to 148 million tonnes in MY 2026/27, according to Conab. Total corn acreage is expected to expand by 4.9% to 23.7 million hectares, driven partly by rising demand from the corn-based ethanol industry. First-crop production is projected at 32.1 million tonnes, while second-crop production is expected to reach 113.3 million tonnes. Although higher acreage is likely to support overall output, weather conditions and crop health, particularly during the second-crop season, will remain key factors determining final production, domestic feed availability and exportable supplies.
- **Kenya's Corn Production Expected to Fall 39% Below Average Due to Drought:** Kenya's corn production is forecast to decline to 2.2 million tonnes in MY 2026/27, 39% below the five-year average, according to the USDA. Severe drought during June–August 2026 damaged major maize-growing regions, reducing crop yields. Lower production could increase Kenya's dependence on corn imports to meet domestic demand, potentially supporting demand for supplies from exporting countries.

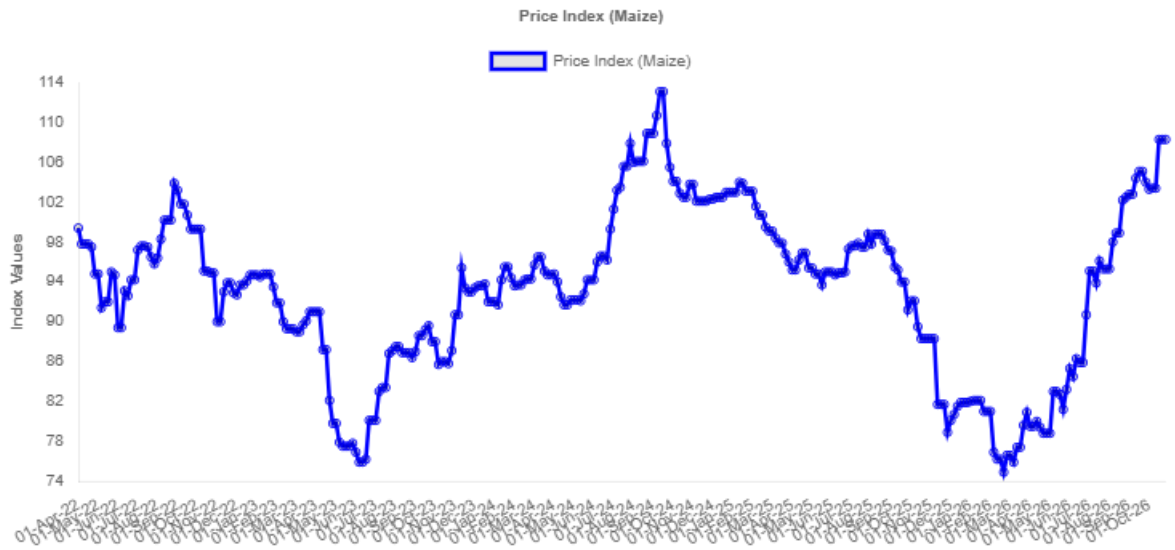

Sowing Progress

As of 2nd Oct 2026, the Ministry of Agriculture & Farmers Welfare reported that India's Kharif maize sowing area decreased to 9354 thousand hectares hectares, compared from 9634 thousand hectares sown during the corresponding period in last year.

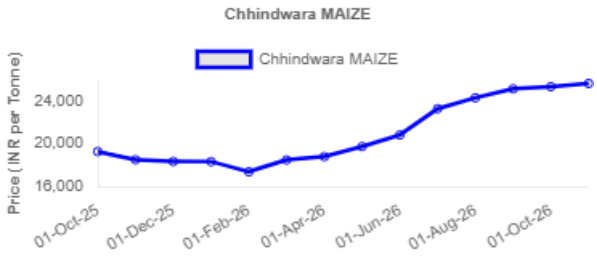

Price Index

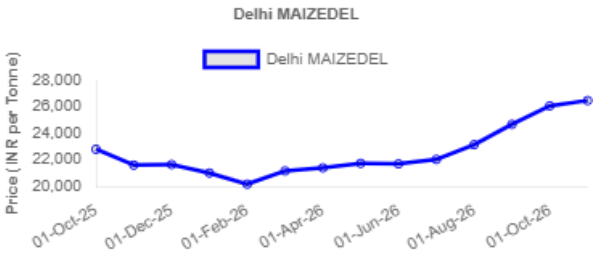

India's Maize Price Index: Average Price of Major Origin (Base Date: 1st April 2022)

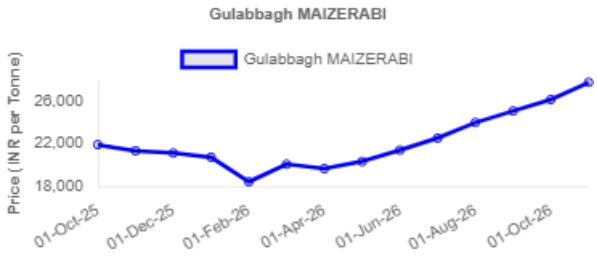

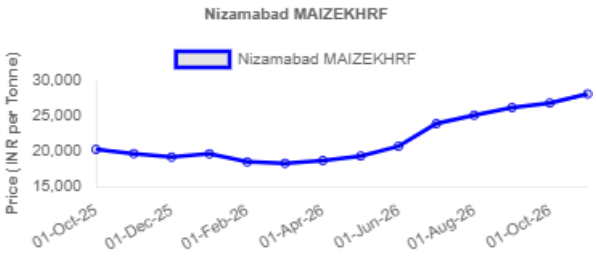

Note: Index derived from average prices of major domestic origins with keeping Base Date as 1st April 2022.

Price Seasonality

Maize prices at Gulababgh market averaged ₹26,218 per tonne in Oct 2026 (till 23rd), up from ₹22,316 last year. However, Sep 2026 prices averaged ₹25,135 per tonne, up from ₹23,284 last year. The Sep 26 monthly average prices are higher than the last five-year average prices witnessed during the corresponding month.

Carryover stocks	297	289	8	313

WASDE

According to the WASDE October Report:

- Foreign corn production is forecast to decline, mainly due to lower production in the European Union, the Philippines, and Mexico.
- EU corn production is revised downward based on harvest results and updated government estimates, with France’s production forecast 38% lower than the previous year.
- Foreign corn ending stocks are higher than last month, primarily due to increased stocks in Argentina.
- World corn ending stocks are projected at 280.4 million tonnes, up 8.3 million tonnes from the previous month, mainly due to higher U.S. stocks.
