Domestic News

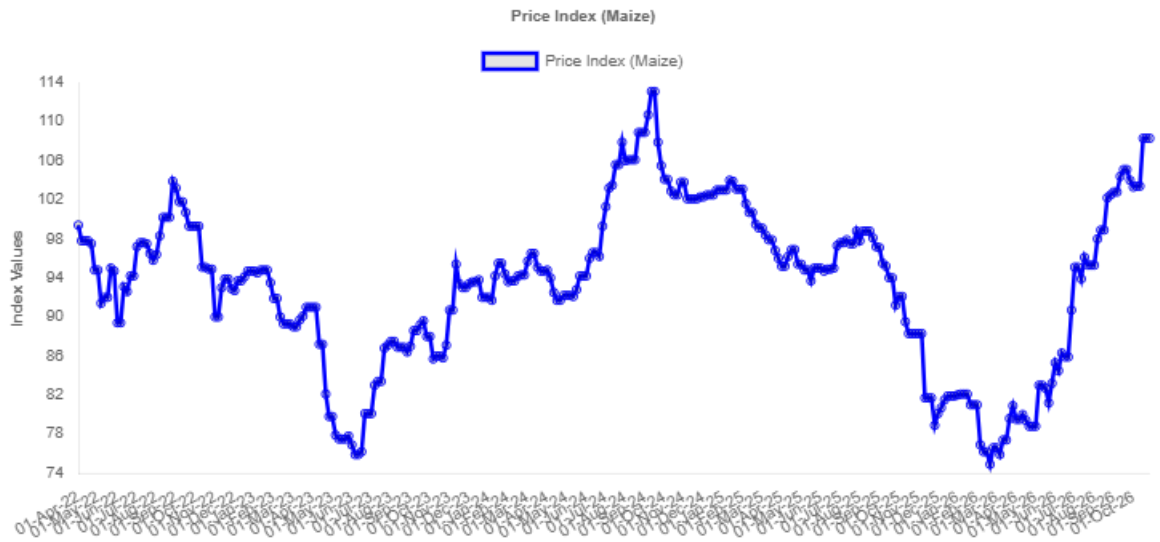

- **Maize prices remained upward trend in most markets throughout the day. The price of Gulabbagh market is quoted at 28500 INR/Tonne, up by 500 INR.**
- **Maharashtra Rabi Maize Sowing Covers 5% of Normal Area as of 26 October 2026:** As of 26 October 2026, Maharashtra's rabi maize sowing stood at 18.4 thousand hectares against a normal area of 375.2 thousand hectares, covering around 5% of the usual area. Pune division led with 11.5 thousand hectares, followed by Kolhapur at 4.3 thousand hectares. At the district level, Solapur recorded the highest sowing at 6.8 thousand hectares, followed by Ahilyanagar at 2.9 thousand hectares and Satara at 2.3 thousand hectares. Sowing remains at an early stage, while acreage progress in major maize-growing districts.
- **India Has No Immediate Plan to Increase Ethanol Blending Beyond 20%:** The government has no immediate plans to increase ethanol blending in petrol beyond the current 20% level (E20). It stated that newer vehicles designed for E20 can use the fuel, while some older vehicles may face compatibility issues. The ethanol blending programme has helped reduce crude oil import costs and provided additional demand for farmers' produce. Meanwhile, the government has updated vehicle rules to allow flex-fuel vehicles that can run on petrol containing up to 100% ethanol (E100).
- **Telangana Maize Prices Rise Amid Dry Weather Concerns:** Maize prices in Telangana have strengthened amid below-normal rainfall and concerns over lower crop yields due to dry weather. Prices in Warangal and Mahabubabad markets have crossed the minimum support price (MSP). Strong demand from traders and expectations of reduced production are supporting prices across major markets in the state. Continued dry conditions could affect crop development and tighten maize supplies, providing further support to prices.

International News

- **CBOT: Corn Dec 2026 is quoted at 450 c/bu , down by 5 cents.**
- **South Africa's 2026 Maize Harvest Expected to Reach Record High:** South Africa's 2026 maize harvest is expected to reach a record level, supported by an upward revision in the latest crop estimate. Total production is forecast to increase from the previous season, with white maize primarily used for human consumption and yellow maize mainly used for animal feed. The higher production outlook indicates improved domestic maize availability and could support export supplies.
- **Black Sea Corn Prices Rise in Romania and Bulgaria, Fall in Ukraine:** Corn prices at Black Sea ports in Romania and Bulgaria increased amid mixed regional market trends, while Ukrainian corn prices declined due to rising new-crop supplies and limited export opportunities. Prices on an FOB Constanta–Varna–Burgas basis strengthened, whereas Ukrainian corn prices on an FOB Danube basis remained under pressure from harvest progress and logistical constraints. In Ukraine, concerns over lower-than-expected yields and the possibility of reduced corn planting next year may affect future production and export potential. Meanwhile, US corn futures declined amid harvest progress, favourable weather and weaker export shipments.
