Executive Summary

- **Pulses market showed a weak trend, with Chana (Delhi) down by ₹750 at ₹73,250/tonne, Masur (Kanpur) unchanged at ₹68,000/tonne, Tur (Akola) down by ₹2,000 at ₹1,04,000/tonne, Urad (Mumbai) down by ₹500 at ₹95,000/tonne, Moong (Jaipur) down by ₹2,000 at ₹82,000/tonne and Yellow Pea (Kanpur) down by ₹500 at ₹48,000/tonne.**
- **Tur Prices Decline for Second Consecutive Week Amid Weak Dal Demand:** Tur prices declined for the second consecutive week as sluggish Tur Dal demand and range-bound Burmese Lemon Tur prices kept trading subdued. Millers remained cautious about high-priced purchases, while limited selling by stockists restricted supplies at lower levels. Despite official acreage rising 1.42% to 46.11 lakh hectares, concerns over actual production persist, with reports of severe crop damage in parts of Maharashtra and Karnataka due to prolonged dry spells. African Tur exports also remain subdued, while NCCF's limited tender sales have had little market impact. Burmese arrivals expected over the next 10–15 days and government buffer stocks could limit near-term gains. However, weak domestic production and tight selling may support a recovery. Akola Bilty Tur could potentially reach ₹12,000–12,500/quintal, depending on crop losses, import arrivals and demand recovery.
- **Chana Market Declines for Second Week as NAFED Tender Sales Weigh on Prices:** Chana prices closed lower for the second consecutive week amid sluggish demand, profit booking and NAFED's shift towards accepting lower-priced tenders. However, buying interest emerged at lower levels towards the week's end as bids in several states were rejected, limiting further declines. NAFED and NCCF stock releases remain key market drivers, while Australian Chana import parity at ₹8,200–8,300/quintal remains significantly above domestic prices of ₹7,200–7,500, keeping importer demand subdued. Meanwhile, inadequate soil moisture in Maharashtra, North Karnataka, Gujarat and Rajasthan raises concerns over upcoming Rabi sowing, although favourable November rainfall could improve prospects. Chana may remain under pressure in the short term, but the medium- to long-term outlook remains positive if sowing declines and government sales moderate. Sowing progress after Diwali will be crucial in determining the next market direction.
- **Urad Prices Remain Weak on Comfortable Supplies, but Long-Term Outlook Stays Firm:** Urad prices remained under pressure last week due to sluggish demand and comfortable availability following substantial Brazilian imports. India reportedly imported around 2 lakh tonnes of Urad from Brazil during July–September, while fresh arrivals in Uttar Pradesh's Gangoh belt are running at 400–500 bags daily, with prices at ₹9,000–9,100/quintal. Domestic arrivals from Madhya Pradesh, Uttar Pradesh and Rajasthan are expected to decline significantly by November, increasing reliance on imports. From December onwards, Burmese supplies are likely to play a major role, followed by Andhra Pradesh's Krishna-line crop in February–March. Although favourable weather could raise Burma's next crop towards 10 lakh tonnes, limited selling and import dependence may support prices. Chennai Burma Urad SQ is expected to trade around ₹9,400–10,000/quintal in the near term, with potential to exceed ₹11,000 during February–April 2027 if prices hold above the ₹9,000 weekly closing support.
- **Moong Prices Weaken as Government Sales and Slow Demand Pressure Market:** Moong prices remained subdued last week following a correction anticipated in the previous market report. Weak demand and government agency sales of approximately 5 lakh tonnes during September and October by MARKFED, NAFED and NCCF have weighed on prices. Arrivals remain limited across Maharashtra, Karnataka, Gujarat, Uttar Pradesh and Madhya Pradesh, with significant supplies concentrated in a few Rajasthan mandis. Meanwhile, questions have emerged over NCCF's reported rejection of a previously accepted bid of ₹7,351/quintal for 7,154.95 tonnes of S-26 Moong, following concerns over the price difference with earlier tenders. Prices may remain volatile within a ₹200–400/quintal range in the short term, but declining Rajasthan arrivals after November and stronger demand from bulk tender buyers could support prices above ₹10,000/quintal after December.
- **Masur Prices Remain Under Pressure as Weak Demand and Cheap Imports Weigh on Market:** Masur prices continue to decline amid sluggish demand and the availability of cheaper imports. Desi bold Masur fell by ₹50–75 per quintal, while small Masur dropped by ₹400–500. Mandi prices are trading at ₹5,500–6,200 per quintal, well below the 2026–27 MSP of ₹7,390, potentially discouraging bold Masur sowing while encouraging small Masur cultivation. Australian and Canadian production is estimated at 2.2 million and 2.35 million tonnes, respectively, ensuring comfortable global availability. Although Masur remains the cheapest pulse and winter demand may improve as temperatures fall, import parity continues to favour overseas supplies. Katni Masur is likely to trade within ₹6,400–6,750 per quintal unless it breaks above resistance.
- **Matar Prices Face Pressure as Imports Rise and Kanpur Support Breaks:** Matar prices weakened amid sluggish domestic demand, rising imports and rumours of an import duty reduction. Kanpur Matar has broken below its ₹4,850 per quintal support level and 50-day moving average, signalling technical weakness, while Canadian Matar at Mundra remains under pressure. Estimated Canadian arrivals total around 1.17 lakh tonnes, with further imports expected in November. Uncertainty over domestic sowing in Uttar Pradesh and Madhya Pradesh is likely to persist until late November. However, a potential rise in Chana prices could support Matar demand for besan production. Prices may remain range-bound in the short term, with import trends, sowing progress and Chana prices shaping the market outlook.

Tur

- **India Chana Sowing Becomes Critical for Pulses Inflation Amid Water Shortages:** Chana sowing has emerged as a key factor determining pulses inflation in 2027, as water shortages and El Niño concerns threaten Rabi acreage. Chana wholesale prices have increased around 30% year-on-year, while Tur, Urad and yellow pea prices have risen by 35–45%. Chana accounts for approximately 45–50% of India's total pulse consumption, making a healthy crop crucial to moderating food inflation. Sowing has begun in some regions but remains slow due to inadequate soil moisture and restrictions on water use. Maharashtra, Rajasthan and Karnataka face particular concerns, with some farmers potentially shifting to less water-intensive crops or avoiding Rabi sowing. Meanwhile, government buffer-stock tender prices have risen around 25% over the past two months. A significant decline in Chana acreage could tighten domestic supplies, increase import dependence and sustain upward price pressure. (Source: The Economic Times)
- **Global Pea Market Remains Range-Bound as Indian Tur Crop Risks Support Demand Prospects:** Ukrainian yellow pea prices remained stable at €0.16/kg, while green peas edged up to €0.19/kg on an FCA Odesa basis. In the UK, green pea prices eased to €0.92/kg and marrowfat peas declined to €1.18/kg on an FOB London basis. India's Tur market remains a key factor influencing global pea trade, as concerns over lower Kharif production and delayed domestic arrivals could increase demand for alternative pulses. African Tur imports are expected to help meet domestic requirements, while any tightening of supplies could renew interest in yellow pea imports. Pea prices are likely to remain range-bound in the near term, with a mild upside bias if Indian import demand strengthens. Government policy on pulse imports and India's crop outlook remain key factors to watch.
- **Centre Resists State Demand for Tur and Chana Buffer Stocks:** Several states, particularly in southern India, have sought supplies of Tur and Chana from the Centre, with some reportedly demanding more than 1,00,000 tonnes of Tur each. However, the Centre is maintaining its position that buffer stocks should be preserved for emergencies and used to intervene in domestic retail markets when necessary, rather than being allocated to state welfare schemes. According to the supplied market update dated 21 October 2026, the Consumer Affairs Ministry's pulse buffer stocks comprise 11,00,000 tonnes of Tur, 23,00,000 tonnes of Chana, 6,50,000 tonnes of Masoor, 3,70,000 tonnes of Moong and 70,000 tonnes of Urad. Meeting large state demands could reduce the stocks available for future market intervention.
- **Maharashtra Urges Farmers to Prioritise Drinking Water Amid Drought, Delays Rabi Sowing:** The state government has urged farmers to prioritise drinking water for people and livestock before using available reserves for Rabi cultivation, amid deficient rainfall and drought conditions. Addressing a gathering in Nashik on 11 October, the Chief Minister appealed to farmers to conserve water until July 2027 and use only surplus supplies for crop sowing. Drought has been declared in 265 talukas, while concerns over fodder shortages have prompted assurances of government support for livestock. The state also plans to strengthen water conservation through desilting reservoirs, repairing check dams, restoring wells and reviving percolation tanks. Limited irrigation availability could delay Rabi sowing and affect crop acreage, particularly for water-dependent crops, while increasing uncertainty over pulses and oilseed production. (Source: The Times of India)
- **Chana Tender; NCCF Approves Karnataka Bid at ₹7,800/Quintal; Other States Rejected:** NCCF's PSS Chana Rabi-2026 auction on 20 October 2026 saw the bid for Karnataka approved at ₹7,800/quintal, while bids from Maharashtra, Telangana, Andhra Pradesh, Madhya Pradesh, Chhattisgarh, Uttar Pradesh and Gujarat were rejected. In a separate auction, NCCF approved a Tur Kharif-2025 bid in Telangana at ₹9,722/quintal. The Chana bid rejection across seven states indicates that the submitted offers did not secure approval, while the Karnataka rate provides a reference for government-stock transactions. The approved Tur bid offers a benchmark for procurement-stock sales in Telangana.

Price Influencing Factor (Tur)

S.No.	Factors	Current Status	Expected Impact on Prices

Urad

- **India Chana Sowing Becomes Critical for Pulses Inflation Amid Water Shortages:** Chana sowing has emerged as a key factor determining pulses inflation in 2027, as water shortages and El Niño concerns threaten Rabi acreage. Chana wholesale prices have increased around 30% year-on-year, while Tur, Urad and yellow pea prices have risen by 35–45%. Chana accounts for approximately 45–50% of India's total pulse consumption, making a healthy crop crucial to moderating food inflation. Sowing has begun in some regions but remains slow due to inadequate soil moisture and restrictions on water use. Maharashtra, Rajasthan and Karnataka face particular concerns, with some farmers potentially shifting to less water-intensive crops or avoiding Rabi sowing. Meanwhile, government buffer-stock tender prices have risen around 25% over the past two months. A significant decline in Chana acreage could tighten domestic supplies, increase import dependence and sustain upward price pressure. (Source: The Economic Times)
- **Centre Resists State Demand for Tur and Chana Buffer Stocks:** Several states, particularly in southern India, have sought supplies of Tur and Chana from the Centre, with some reportedly demanding more than 1,00,000 tonnes of Tur each. However, the Centre is maintaining its position that buffer stocks should be preserved for emergencies and used to intervene in domestic retail markets when necessary, rather than being allocated to state welfare schemes. According to the supplied market update dated 21 October 2026, the Consumer Affairs Ministry's pulse buffer stocks comprise 11,00,000 tonnes of Tur, 23,00,000 tonnes of Chana, 6,50,000 tonnes of Masoor, 3,70,000 tonnes of Moong and 70,000 tonnes of Urad. Meeting large state demands could reduce the stocks available for future market intervention.
- **Maharashtra Urges Farmers to Prioritise Drinking Water Amid Drought, Delays Rabi Sowing:** The state government has urged farmers to prioritise drinking water for people and livestock before using available reserves for Rabi cultivation, amid deficient rainfall and drought conditions. Addressing a gathering in Nashik on 11 October, the Chief Minister appealed to farmers to conserve water until July 2027 and use only surplus supplies for crop sowing. Drought has been declared in 265 talukas, while concerns over fodder shortages have prompted assurances of government support for livestock. The state also plans to strengthen water conservation through desilting reservoirs, repairing check dams, restoring wells and reviving percolation tanks. Limited irrigation availability could delay Rabi sowing and affect crop acreage, particularly for water-dependent crops, while increasing uncertainty over pulses and oilseed production. (Source: The Times of India)

Masoor

- **Pulse Imports; 38,896 Tonnes of Canadian Masoor and Matar to Arrive at Mundra:** The vessel M.V. Pacific, carrying 38,896 tonnes of pulses from Canada, is scheduled to arrive at Mundra Port on 27 October 2026, according to the IPGA Market Update dated 23 October. The shipment comprises 28,396 tonnes of Masoor (lentils) and 10,500 tonnes of Matar (yellow peas). Masoor accounts for approximately 73% of the consignment, with Matar making up the remaining 27%.
- **Canada; Saskatchewan Harvest Reaches 97% Completion, Lentils and Field Peas Nearly Finished:** Saskatchewan's harvest was 97% complete as of 19 October 2026, according to the provincial crop report dated 22 October. Lentils, field peas, barley, durum and spring wheat were each 99% harvested, while canola reached 96% and soybeans 74%. Chickpea harvesting was also reported as complete. Strong winds and frost caused crop damage during the week, while limited rainfall brought little improvement in topsoil moisture. Cropland moisture was rated adequate across 84% of the area, with 11% short and 1% very short. The near-completion of the lentil and field pea harvest provides a clearer picture of available supplies, although the report did not provide updated production estimates or yield figures. (Source: Alberta Farm Express)
- **Centre Resists State Demand for Tur and Chana Buffer Stocks:** Several states, particularly in southern India, have sought supplies of Tur and Chana from the Centre, with some reportedly demanding more than 1,00,000 tonnes of Tur each. However, the Centre is maintaining its position that buffer stocks should be preserved for emergencies and used to intervene in domestic retail markets when necessary, rather than being allocated to state welfare schemes. According to the supplied market update dated 21 October 2026, the Consumer Affairs Ministry's pulse buffer stocks comprise 11,00,000 tonnes of Tur, 23,00,000 tonnes of Chana, 6,50,000 tonnes of Masoor, 3,70,000 tonnes of Moong and 70,000 tonnes of Urad. Meeting large state demands could reduce the stocks available for future market intervention.
- **Haryana; Subsidy on Certified Chana and Masoor Seeds for Rabi 2026–27:** The Agriculture and Farmers Welfare Department has introduced subsidies on certified Chana and Masoor seeds to promote pulses cultivation during the Rabi 2026–27 season. For varieties less than five years old, Chana seeds qualify for a 75% subsidy, capped at ₹6,000 per quintal, while Masoor seeds qualify for 100%, capped at ₹12,000 per quintal. For older varieties, the subsidy is 50% up to ₹4,000 per quintal for Chana and 75% up to ₹9,000 per quintal for Masoor. Eligible farmers can receive seeds for up to 2.5 acres after verification. (Source: Atal Hind)
- **Canada Masoor Production Falls 27%, but Higher Carry-In Stocks Limit Supply Tightness:** Canada's lentil production is estimated to decline 26.6% to 24,67,000 tonnes in 2026–27, compared with 33,63,000 tonnes last season, as planted area falls 10.9% and average yields drop 17.6%. However, higher carry-in stocks and imports are expected to cushion the decline, with total supply projected at 38,25,000 tonnes, down just 3.7% year-on-year. Exports are forecast at 24,00,000 tonnes, while carry-out stocks are expected to remain substantial at 11,45,000 tonnes. Red lentil prices may face pressure from ample supplies in Canada and Australia, although demand from India and other South Asian markets could provide support. Green lentils may remain relatively firmer due to tighter production across several exporting countries. (Source: Mundus Agri)
- **India Pulses Sowing Reaches 0.15 Lakh Hectares as Rabi Season Begins:** According to the Ministry of Agriculture and Farmers Welfare's latest Rabi sowing update dated 16 October 2026, total pulses acreage reached 0.15 lakh hectares, compared with 0.10 lakh hectares during the corresponding period last year, an increase of 0.05 lakh hectares (50%). Gram (Chana) sowing stood at 0.06 lakh hectares against zero reported last year, with sowing commencing in Nagaland and Rajasthan. Lentil sowing had begun in Mizoram and Nagaland, while fieldpea and urdbean sowing was also reported in a few states. Kulthi, Moongbean and Lathyrus sowing had not yet commenced. Overall, Rabi pulses sowing remains at an early stage, with acreage likely to change as sowing progresses across major producing states.
- **India Pulse Imports of 66,496 Tonnes of Canadian Masoor and Matar Scheduled to Arrive at Mundra:** A vessel, M.V. Sakizaya Unicorn, carrying 66,496 tonnes of pulses from Canada, is scheduled to arrive at Mundra Port on 21 October 2026, according to shipping agency reports. The consignment comprises 58,363.944 tonnes of Masoor (lentils) and 8,132.056 tonnes of Matar (yellow peas). Masoor accounts for approximately 88% of the shipment, while Matar makes up the remaining 12%. The arrival will add to domestic port inventories and could improve near-term availability of imported pulses. The impact on prices will depend on unloading, distribution, existing stocks and demand from millers.
- **India Rabi Crops Face Production Risks as Rainfall Deficits and El Niño Concerns Grow:** Deficient rainfall, inadequate soil moisture and declining irrigation reserves are raising concerns over Rabi sowing and crop yields across major producing states. Rajasthan recorded a 55% rainfall deficit during 1–18 October, while Maharashtra received only 3% of its normal rainfall during the period, following a 52% deficit in September. Madhya Pradesh also recorded a 96% rainfall deficit in October so far. In contrast, excess October rainfall in Punjab and Haryana could support wheat sowing. Chana and mustard sowing in Rajasthan remains significantly below seasonal targets, while pulses and oilseeds face greater risks because 60–70% of their Rabi acreage is rain-fed. Lower sowing and potential yield losses could tighten supplies and support prices of Chana, Masoor, Mustard and Wheat, although winter rainfall and irrigation availability will be crucial. (Source: BusinessLine)
- **Masoor mixed CPI and WPI Signals Indicate Moderating Retail Inflation:** Masoor recorded mixed price signals in September 2026 compared with August. The CPI index remained broadly unchanged at 104.5, with a reported marginal decline of 0.03%, while the WPI index increased by 0.41% to 97.9 from 97.5. CPI inflation eased to 3.12% from 4.03%, indicating a moderation in consumer-level inflation. In contrast, WPI inflation edged up to 3.4% from 3.3%, suggesting a slight increase in wholesale price pressure. Overall, easing CPI inflation may indicate reduced retail price pressure, while the marginal rise in WPI inflation points to firmer wholesale trends.

Price Influencing Factor (Masoor)

S.No.	Factors	Current Status	Expected Impact on Prices

Chana

- **India Chana Sowing Becomes Critical for Pulses Inflation Amid Water Shortages:** Chana sowing has emerged as a key factor determining pulses inflation in 2027, as water shortages and El Niño concerns threaten Rabi acreage. Chana wholesale prices have increased around 30% year-on-year, while Tur, Urad and yellow pea prices have risen by 35–45%. Chana accounts for approximately 45–50% of India's total pulse consumption, making a healthy crop crucial to moderating food inflation. Sowing has begun in some regions but remains slow due to inadequate soil moisture and restrictions on water use. Maharashtra, Rajasthan and Karnataka face particular concerns, with some farmers potentially shifting to less water-intensive crops or avoiding Rabi sowing. Meanwhile, government buffer-stock tender prices have risen around 25% over the past two months. A significant decline in Chana acreage could tighten domestic supplies, increase import dependence and sustain upward price pressure. (Source: The Economic Times)
- **Canada; Saskatchewan Harvest Reaches 97% Completion, Lentils and Field Peas Nearly Finished:** Saskatchewan's harvest was 97% complete as of 19 October 2026, according to the provincial crop report dated 22 October. Lentils, field peas, barley, durum and spring wheat were each 99% harvested, while canola reached 96% and soybeans 74%. Chickpea harvesting was also reported as complete. Strong winds and frost caused crop damage during the week, while limited rainfall brought little improvement in topsoil moisture. Cropland moisture was rated adequate across 84% of the area, with 11% short and 1% very short. The near-completion of the lentil and field pea harvest provides a clearer picture of available supplies, although the report did not provide updated production estimates or yield figures. (Source: Alberta Farm Express)
- **Centre Resists State Demand for Tur and Chana Buffer Stocks:** Several states, particularly in southern India, have sought supplies of Tur and Chana from the Centre, with some reportedly demanding more than 1,00,000 tonnes of Tur each. However, the Centre is maintaining its position that buffer stocks should be preserved for emergencies and used to intervene in domestic retail markets when necessary, rather than being allocated to state welfare schemes. According to the supplied market update dated 21 October 2026, the Consumer Affairs Ministry's pulse buffer stocks comprise 11,00,000 tonnes of Tur, 23,00,000 tonnes of Chana, 6,50,000 tonnes of Masoor, 3,70,000 tonnes of Moong and 70,000 tonnes of Urad. Meeting large state demands could reduce the stocks available for future market intervention.
- **Haryana; Subsidy on Certified Chana and Masoor Seeds for Rabi 2026–27:** The Agriculture and Farmers Welfare Department has introduced subsidies on certified Chana and Masoor seeds to promote pulses cultivation during the Rabi 2026–27 season. For varieties less than five years old, Chana seeds qualify for a 75% subsidy, capped at ₹6,000 per quintal, while Masoor seeds qualify for 100%, capped at ₹12,000 per quintal. For older varieties, the subsidy is 50% up to ₹4,000 per quintal for Chana and 75% up to ₹9,000 per quintal for Masoor. Eligible farmers can receive seeds for up to 2.5 acres after verification. (Source: Atal Hind)
- **India Pulses Sowing Reaches 0.15 Lakh Hectares as Rabi Season Begins:** According to the Ministry of Agriculture and Farmers Welfare's latest Rabi sowing update dated 16 October 2026, total pulses acreage reached 0.15 lakh hectares, compared with 0.10 lakh hectares during the corresponding period last year, an increase of 0.05 lakh hectares (50%). Gram (Chana) sowing stood at 0.06 lakh hectares against zero reported last year, with sowing commencing in Nagaland and Rajasthan. Lentil sowing had begun in Mizoram and Nagaland, while fieldpea and urdbean sowing was also reported in a few states. Kulthi, Moongbean and Lathyrus sowing had not yet commenced. Overall, Rabi pulses sowing remains at an early stage, with acreage likely to change as sowing progresses across major producing states.
- **Chana Tender; NCCF Approves Karnataka Bid at ₹7,800/Quintal; Other States Rejected:** NCCF's PSS Chana Rabi-2026 auction on 20 October 2026 saw the bid for Karnataka approved at ₹7,800/quintal, while bids from Maharashtra, Telangana, Andhra Pradesh, Madhya Pradesh, Chhattisgarh, Uttar Pradesh and Gujarat were rejected. In a separate auction, NCCF approved a Tur Kharif-2025 bid in Telangana at ₹9,722/quintal. The Chana bid rejection across seven states indicates that the submitted offers did not secure approval, while the Karnataka rate provides a reference for government-stock transactions. The approved Tur bid offers a benchmark for procurement-stock sales in Telangana.
- **India Rabi Crops Face Production Risks as Rainfall Deficits and El Niño Concerns Grow:** Deficient rainfall, inadequate soil moisture and declining irrigation reserves are raising concerns over Rabi sowing and crop yields across major producing states. Rajasthan recorded a 55% rainfall deficit during 1–18 October, while Maharashtra received only 3% of its normal rainfall during the period, following a 52% deficit in September. Madhya Pradesh also recorded a 96% rainfall deficit in October so far. In contrast, excess October rainfall in Punjab and Haryana could support wheat sowing. Chana and mustard sowing in Rajasthan remains significantly below seasonal targets, while pulses and oilseeds face greater risks because 60–70% of their Rabi acreage is rain-fed. Lower sowing and potential yield losses could tighten supplies and support prices of Chana, Masoor, Mustard and Wheat, although winter rainfall and irrigation availability will be crucial. (Source: BusinessLine)
- **Bengal Gram rising CPI and WPI Indices Indicate Increasing Price Pressure:** Bengal Gram recorded an increase in both consumer and wholesale price indices in September 2026 compared with August. The CPI index rose to 101.0 from 99.8, an increase of 1.20%, while the WPI index increased to 128.1 from 125.1, up 2.40%. CPI inflation accelerated to 1.42% from 0.32%, while WPI inflation moved sharply from -0.2% to 4.3%. These increases indicate strengthening retail and wholesale price pressures for Bengal Gram.

Pea

- **Pulse Imports; 38,896 Tonnes of Canadian Masoor and Matar to Arrive at Mundra:** The vessel M.V. Pacific, carrying 38,896 tonnes of pulses from Canada, is scheduled to arrive at Mundra Port on 27 October 2026, according to the IPGA Market Update dated 23 October. The shipment comprises 28,396 tonnes of Masoor (lentils) and 10,500 tonnes of Matar (yellow peas). Masoor accounts for approximately 73% of the consignment, with Matar making up the remaining 27%.
- **India Chana Sowing Becomes Critical for Pulses Inflation Amid Water Shortages:** Chana sowing has emerged as a key factor determining pulses inflation in 2027, as water shortages and El Niño concerns threaten Rabi acreage. Chana wholesale prices have increased around 30% year-on-year, while Tur, Urad and yellow pea prices have risen by 35–45%. Chana accounts for approximately 45–50% of India's total pulse consumption, making a healthy crop crucial to moderating food inflation. Sowing has begun in some regions but remains slow due to inadequate soil moisture and restrictions on water use. Maharashtra, Rajasthan and Karnataka face particular concerns, with some farmers potentially shifting to less water-intensive crops or avoiding Rabi sowing. Meanwhile, government buffer-stock tender prices have risen around 25% over the past two months. A significant decline in Chana acreage could tighten domestic supplies, increase import dependence and sustain upward price pressure. (Source: The Economic Times)
- **Global Pea Market Remains Range-Bound as Indian Tur Crop Risks Support Demand Prospects:** Ukrainian yellow pea prices remained stable at €0.16/kg, while green peas edged up to €0.19/kg on an FCA Odesa basis. In the UK, green pea prices eased to €0.92/kg and marrowfat peas declined to €1.18/kg on an FOB London basis. India's Tur market remains a key factor influencing global pea trade, as concerns over lower Kharif production and delayed domestic arrivals could increase demand for alternative pulses. African Tur imports are expected to help meet domestic requirements, while any tightening of supplies could renew interest in yellow pea imports. Pea prices are likely to remain range-bound in the near term, with a mild upside bias if Indian import demand strengthens. Government policy on pulse imports and India's crop outlook remain key factors to watch.
- **Canada; Saskatchewan Harvest Reaches 97% Completion, Lentils and Field Peas Nearly Finished:** Saskatchewan's harvest was 97% complete as of 19 October 2026, according to the provincial crop report dated 22 October. Lentils, field peas, barley, durum and spring wheat were each 99% harvested, while canola reached 96% and soybeans 74%. Chickpea harvesting was also reported as complete. Strong winds and frost caused crop damage during the week, while limited rainfall brought little improvement in topsoil moisture. Cropland moisture was rated adequate across 84% of the area, with 11% short and 1% very short. The near-completion of the lentil and field pea harvest provides a clearer picture of available supplies, although the report did not provide updated production estimates or yield figures. (Source: Alberta Farm Express)
- **Maharashtra Urges Farmers to Prioritise Drinking Water Amid Drought, Delays Rabi Sowing:** The state government has urged farmers to prioritise drinking water for people and livestock before using available reserves for Rabi cultivation, amid deficient rainfall and drought conditions. Addressing a gathering in Nashik on 11 October, the Chief Minister appealed to farmers to conserve water until July 2027 and use only surplus supplies for crop sowing. Drought has been declared in 265 talukas, while concerns over fodder shortages have prompted assurances of government support for livestock. The state also plans to strengthen water conservation through desilting reservoirs, repairing check dams, restoring wells and reviving percolation tanks. Limited irrigation availability could delay Rabi sowing and affect crop acreage, particularly for water-dependent crops, while increasing uncertainty over pulses and oilseed production. (Source: The Times of India)
- **India Pulse Imports of 66,496 Tonnes of Canadian Masoor and Matar Scheduled to Arrive at Mundra:** A vessel, M.V. Sakizaya Unicorn, carrying 66,496 tonnes of pulses from Canada, is scheduled to arrive at Mundra Port on 21 October 2026, according to shipping agency reports. The consignment comprises 58,363.944 tonnes of Masoor (lentils) and 8,132.056 tonnes of Matar (yellow peas). Masoor accounts for approximately 88% of the shipment, while Matar makes up the remaining 12%. The arrival will add to domestic port inventories and could improve near-term availability of imported pulses. The impact on prices will depend on unloading, distribution, existing stocks and demand from millers.

Price Influencing Factor (Pea)
