Rapeseed Daily Digest

26 October 2026

Executive Summary

- **At Jaipur, rapeseed prices were quoted at INR ₹92500 up by 500, Rapeseed meal prices were quoted at INR ₹28400 down by 100, while Rapeseed oil were quoted at INR ₹1,81,000 up 2000.**
- **Indian Mustard Prices Firm on Tight Arrivals and Strong Crushing Demand.**
- **Agricultural Scientists Advise Farmers to Complete Mustard Sowing Early.**
- **Untimely Rainfall Raises Concerns Over Mustard Sowing in Hanumangarh.**
- **Weather Conditions Influence Mustard Sowing in Atru, Rajasthan.**
- **Canola (ICE) Nov 2026 closed at 778.1 CAD/Tonnes up by 1.1 CAD.**
- **Rising Biofuel Demand to Reduce Canadian Rapeseed Export Availability.**
- **Canada May Reduce Rapeseed Exports by 14% as Domestic Crushing Expands.**

Rapeseed Daily Digest

26 October 2026

Domestic News

- **At Jaipur, rapeseed prices were quoted at INR ₹92500 up by 500, Rapeseed meal prices were quoted at INR ₹28400 down by 100, while Rapeseed oil were quoted at INR ₹1,81,000 up 2000.**
- **Indian Mustard Prices Firm on Tight Arrivals and Strong Crushing Demand :** Indian mustard seed prices are strengthening as limited arrivals and firm procurement by oil mills support the market. As of October 26, 2026, New Delhi FOB prices for brown bold sortex mustard seeds stood at €0.81/kg, up 2.53%, while yellow bold sortex seeds rose 1.72% to €1.01/kg. Reduced open-market availability and steady demand for mustard oil and cake are supporting prices, although cheaper imported palm and other vegetable oils may limit further gains. Meanwhile, the commencement of the 2026/27 rabi sowing season is drawing attention to acreage expansion and weather conditions, particularly concerns over soil moisture and potential El Niño-related risks. Although expectations of higher mustard acreage and production could improve domestic seed availability and ease prices over the medium term, the near-term outlook remains mildly bullish due to tight supplies and strong crushing demand.
- **Agricultural Scientists Advise Farmers to Complete Mustard Sowing Early :** Agricultural scientists in Bhagalpur, Bihar, have advised farmers to complete mustard sowing promptly to ensure better crop establishment and yield. Timely sowing is important for maintaining crop growth and productivity, while delays may adversely affect yields. Farmers have been encouraged to follow recommended agricultural practices and complete field preparation and sowing within the suitable period. The advisory highlights the importance of timely rabi crop sowing in supporting mustard production in the region.
- **Untimely Rainfall Raises Concerns Over Mustard Sowing in Hanumangarh :** Rainfall during the peak mustard sowing season in Hanumangarh district of Rajasthan has raised concerns among farmers over potential crop damage and disruptions to field operations. Excess moisture during sowing can affect seed germination and crop establishment, while wet field conditions may delay further sowing activities. The development has created uncertainty for farmers during the ongoing rabi planting period, with crop establishment and subsequent productivity depending on prevailing weather conditions. Continued unfavourable weather during this critical stage could affect mustard acreage and production prospects in the affected areas.
- **Weather Conditions Influence Mustard Sowing in Atru, Rajasthan :** Mustard cultivation in Atru, Baran district, Rajasthan, is facing challenges during the ongoing rabi sowing season due to prevailing weather conditions. Farmers are monitoring field conditions and moisture availability while carrying out sowing activities, as timely planting is important for proper crop establishment and productivity. Unfavourable weather during this period could disrupt sowing schedules and affect the initial growth of the crop, creating uncertainty over mustard cultivation in the region.

International News

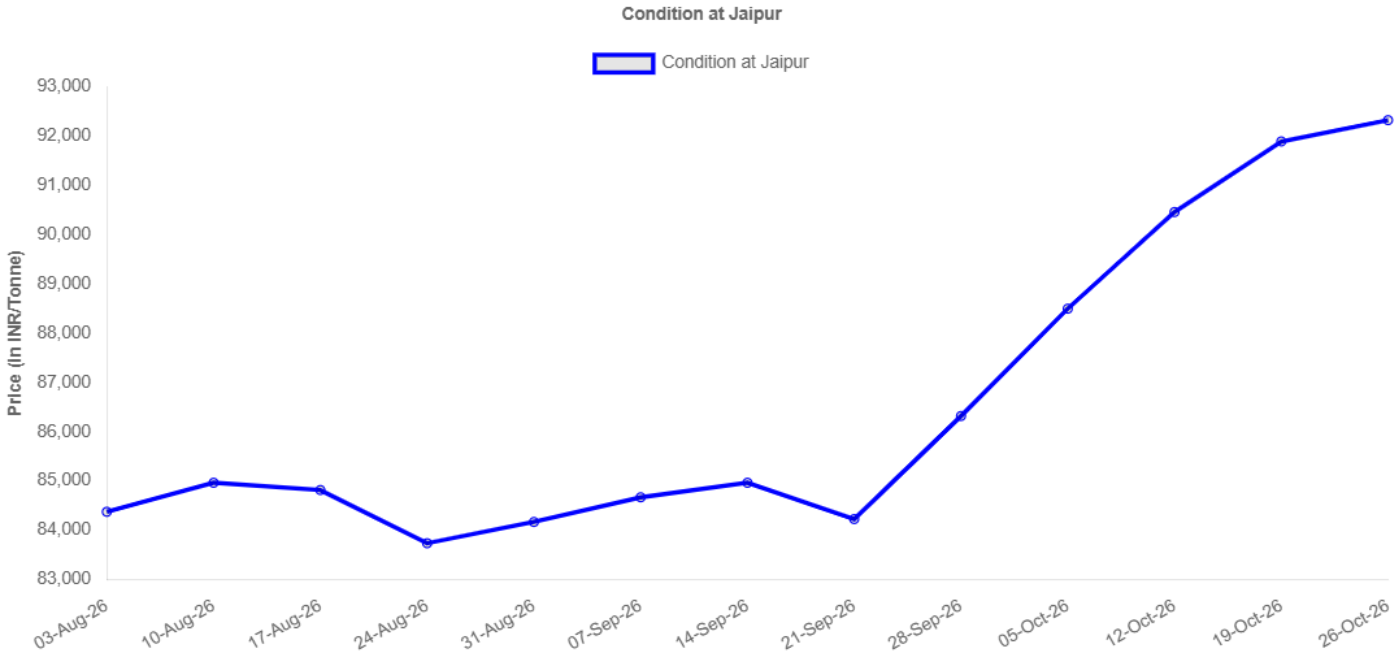

- **Canola (ICE) Nov 2026 closed at 778.1 CAD/Tonnes up by 1.1 CAD.**
- **Rising Biofuel Demand to Reduce Canadian Rapeseed Export Availability :** Canada's rapeseed (canola) export availability is expected to decline in the 2026/27 marketing year as expanding domestic crushing capacity and growing biofuel demand divert more supplies towards domestic processing. According to the International Grains Council (IGC), Canadian rapeseed production is estimated at 22.1 million tonnes, broadly in line with the previous season and 600,000 tonnes above the September estimate, although delayed harvesting in Saskatchewan and Alberta and prevailing weather conditions remain important factors. Domestic consumption is projected to increase to 14.5 million tonnes from 13.1 million tonnes in 2025/26, supported by stronger demand for canola oil and meal and increased processing for biodiesel and renewable diesel production. Consequently, rapeseed exports are forecast to fall to 7.8 million tonnes from 9.1 million tonnes in the previous season. Growing demand for canola oil, supported partly by changes in US biofuel incentives and low-carbon fuel policies, is encouraging greater domestic processing. Reduced Canadian export availability could tighten global rapeseed supplies, increase competition among international buyers and provide underlying support to global rapeseed prices.
- **Canada May Reduce Rapeseed Exports by 14% as Domestic Crushing Expands :** Canada's rapeseed (canola) exports could decline by approximately 14% in the 2026/27 marketing year as expanding domestic crushing capacity and rising demand for biofuel production increase domestic consumption. Greater processing of canola into oil and meal is expected to divert a larger share of domestic supplies away from export markets. The trend reflects growing demand for canola oil as a feedstock for biodiesel and renewable diesel production, alongside investments in domestic crushing facilities. Reduced Canadian export availability could tighten global rapeseed supplies, intensify competition among importing countries and provide support to international rapeseed prices. However, the overall market impact will also depend on Canadian production levels, export demand and the availability of supplies from other major producing countries.
