Executive Summary

- **At Indore, soybean seed prices were quoted at ₹72678/tonne, up by 366. Soy meal prices were quoted at ₹59250 up by 1250, while soybean oil prices were quoted at INR ₹143290 down 660/tonne. Soymeal (Hypro) was quoted at ₹63500 up by 500.**
- **Indian Soybean Production Decline and Global Price Support.**
- **Drought Conditions in Alirajpur Threaten Soybean Production.**
- **Maharashtra Soybean Prices and Arrivals – October 26, 2026.**
- **Heavy Soybean Arrivals Prompt Inspection of Ashta Agricultural Market.**
- **On Friday 23rd Oct, CBOT soybean futures for Nov 2026 delivery were quoted at 1257.4 cents up by 4/bushel, indicating mild weakness in soybean prices. Soybean meal futures down by USD 0.9 to USD 346.5 /short tonne, while soybean oil futures slipped up by 0.6 cents to 66.8 cents/pound.**
- **Global Soybean Prices Fall to Two-Month Low on US Harvest Pressure.**
- **Brazilian Soybean Meal Prices Fall Below Argentine Levels Amid Port Disruptions.**
- **Russian Soybean Meal Production Reaches a Record Share of Total Meal Output.**

Domestic News

- **At Indore, soybean seed prices were quoted at ₹72678/tonne, up by 366. Soy meal prices were quoted at ₹59250 up by 1250, while soybean oil prices were quoted at INR ₹143290 down 660/tonne. Soymeal (Hypro) was quoted at ₹63500 up by 500.**
- **Indian Soybean Production Decline and Global Price Support :** India's 2026 kharif soybean production is projected to decline by 2.11% year-on-year to approximately 10.763 million tonnes, compared with 11.025 million tonnes in the previous season, due to inadequate and uneven monsoon rainfall. Drought conditions in Maharashtra are expected to reduce yields, while higher production in Madhya Pradesh may partially offset the national shortfall. Reduced domestic availability could tighten soybean supplies and affect crushing volumes, edible oil production and soybean meal availability. Indian soybean prices remained broadly stable during the second half of October, while US soybean futures declined approximately 6% month-on-month amid harvest pressure.
- **Drought Conditions in Alirajpur Threaten Soybean Production :** Inadequate and uneven monsoon rainfall in Alirajpur district of Madhya Pradesh has caused significant damage to kharif crops, including soybean and maize, raising concerns over agricultural output and farmers' livelihoods. The district recorded a rainfall deficit of approximately 52% compared with normal levels, leaving standing crops vulnerable to moisture stress and reduced yields. The wider state has also experienced deficient rainfall, with 30 of Madhya Pradesh's 55 districts receiving below-normal precipitation. The crop losses have increased concerns about soybean production in the affected regions, while water shortages could also create challenges for irrigation during the upcoming rabi season.
- **Maharashtra Soybean Prices and Arrivals – October 26, 2026 :** Soybean arrivals remained high in Maharashtra's Jalna and Amravati markets on October 26, 2026, while Latur led in prices, according to the latest mandi update. Jalna recorded a significant arrival of 11,375 quintals of yellow soybeans, with the average price reported at ₹6,950 per quintal. In Amravati, soybean prices were around ₹6,925 per quintal, with arrivals of approximately 8,133 tonnes. Latur continued to record comparatively higher prices, reflecting firm demand for soybean in the region. The combination of substantial arrivals and firm mandi prices indicates active trading in Maharashtra's soybean markets, with price differences across locations reflecting variations in demand, quality and market conditions.
- **Heavy Soybean Arrivals Prompt Inspection of Ashta Agricultural Market :** Heavy soybean arrivals at the Ashta Agricultural Produce Market in Sehore district, Madhya Pradesh, have prompted the market secretary to inspect arrangements to ensure smooth procurement and trading operations. The large volume of incoming produce has increased pressure on market infrastructure, raising concerns over vehicle movement, parking and the timely handling of farmers' produce. The inspection focused on reviewing market arrangements and managing the increased inflow of soybean during the ongoing harvest season. Sustained heavy arrivals could influence local price movements as more freshly harvested produce enters the market.

International News

- **On Friday 23rd Oct, CBOT soybean futures for Nov 2026 delivery were quoted at 1257.4 cents up by 4/bushel, indicating mild weakness in soybean prices. Soybean meal futures down by USD 0.9 to USD 346.5 /short tonne, while soybean oil futures slipped up by 0.6 cents to 66.8 cents/pound.**
- **Global Soybean Prices Fall to Two-Month Low on US Harvest Pressure :** US soybean futures declined around 1% on October 26, 2026, reaching a two-month low as supplies from the record US harvest entered the market and lower crude oil prices added pressure. The most-active soybean contract fell to approximately $12.44 per bushel, its weakest level since August 26. Despite the bearish impact of seasonal harvest pressure, US soybean export demand remained supportive, with net export sales reaching approximately 2.8 million tonnes for the week ended October 15, boosted by Chinese purchases. Overall, advancing US harvest supplies and weaker crude oil prices are weighing on international soybean prices, while strong export demand provides some underlying support.
- **Brazilian Soybean Meal Prices Fall Below Argentine Levels Amid Port Disruptions :** Brazilian soybean meal export prices have dropped below Argentine prices, with the discount reaching its widest level since January 2026. On October 21, Brazilian soybean meal was assessed at $401.57 per tonne FOB Paranaguá, compared with $412.59 per tonne FOB Up River in Argentina, making Brazilian supplies approximately $11 per tonne cheaper. The price reversal has been driven partly by persistent rainfall at Paranaguá port, which has delayed vessel loading and caused severe congestion, with some vessels reportedly waiting up to 40 days. Brazil exported 1.1 million tonnes of soybean meal during the first 11 working days of October, up 3% year-on-year. If the current pace continues, monthly exports could reach 2.3 million tonnes, exceeding the forecast of 2.19 million tonnes. More than 20% of the planned area for Brazil's 2026/27 soybean crop has already been planted, while concerns about the potential impact of El Niño have eased. Production is forecast at 177 million tonnes, which could support further growth in crushing and soybean meal exports and intensify competition with Argentine suppliers, limiting upward pressure on global soybean meal prices.
- **Russian Soybean Meal Production Reaches a Record Share of Total Meal Output :** Russia's soybean meal production reached 4.748 million tonnes in 2025, marking a 2% increase compared with the previous year. Soybean meal accounted for more than 33% of the country's total meal production for the first time, highlighting the growing importance of soybean processing within the domestic feed industry. Soybeans are also emerging as an important raw material for higher-value agricultural processing. In 2026, access to the Chinese market for Russian food-grade soybean meal supported a sevenfold increase in shipments, reaching 25,500 tonnes. The development highlights the potential for exporting processed agricultural products rather than unprocessed raw materials, allowing producers to capture greater value and reduce their exposure to restrictions affecting raw commodity trade. Similar value-added processing opportunities for other pulses, including peas and chickpeas, remain at an early stage.
