Onion

- **Onion WPI Inflation Surges to 191.33% as Retail Inflation Crosses 100%:** India's onion wholesale price inflation surged to 191.33% in September 2026, compared with -65.18% in September 2025, according to the Ministry of Commerce & Industry. The Wholesale Price Index (WPI) rose to 289.0, while the Consumer Price Index (CPI) reached 142.88, registering retail inflation of 108.10% year-on-year. The sharp reversal followed a prolonged period of price deflation during 2025 and early 2026, with wholesale inflation turning positive in June before accelerating sharply in the third quarter. The widening price surge indicates mounting pressure across wholesale and retail markets. Continued supply constraints could further increase procurement costs, strain trader working capital and reduce consumer purchasing power. (Source: Ministry of Commerce & Industry)
- **Onion Arrivals Reach 4,46,100 Tonnes by October 10, Remain Below Historical Average:** India's onion arrivals stood at 4,46,100 tonnes till October 10, 2026, compared with 13,95,600 tonnes in September, indicating a gradual start to October supplies. As the current figure covers only the first ten days, it should not be directly compared with the full-month September volume. The chart shows October's five-year average at around 22,00,000 tonnes, while the five-year minimum is approximately 6,50,000 tonnes, indicating that arrivals remain below normal seasonal levels. Onion supplies have also remained significantly below 2025 levels through most of 2026. If arrivals continue to lag behind historical averages, market availability could remain tight, supporting prices during the transition to fresh kharif supplies.

Wholesale Price Index

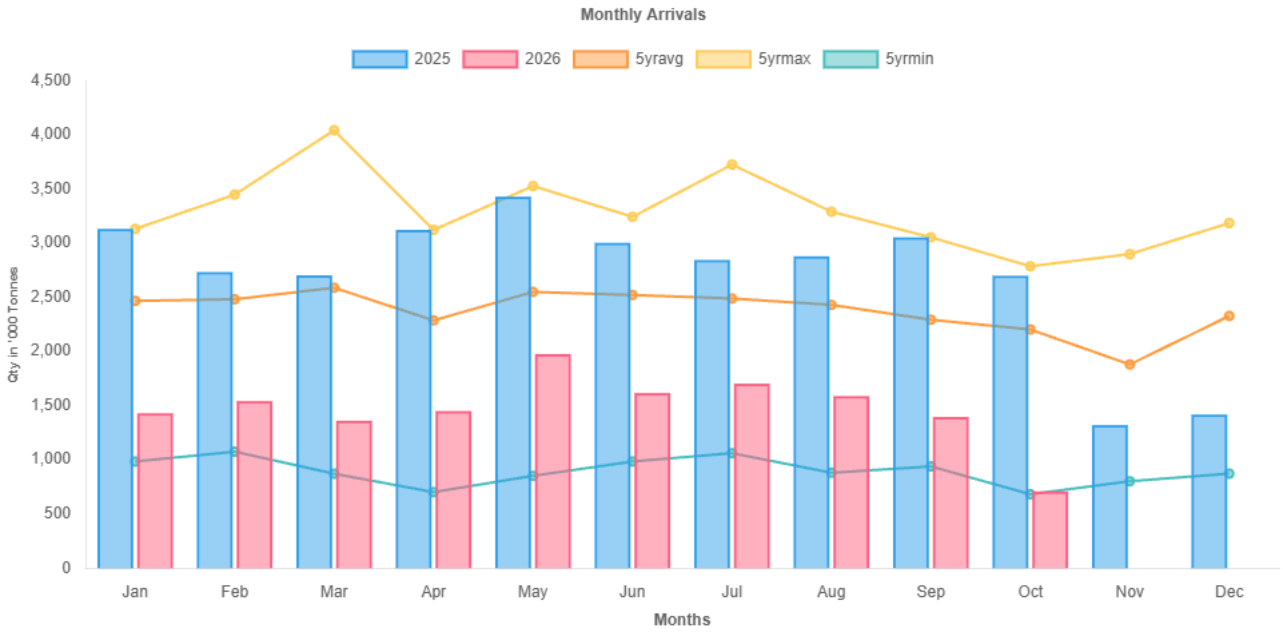

According to the Ministry of Commerce & Industry, the annual rate of inflation of Onion, based on the monthly Wholesale Price Index (WPI), stood at 191.33% for the month of Sept 2026, as compared to -65.18% for the corresponding month of the previous year.

Ministry of Commerce &Industry

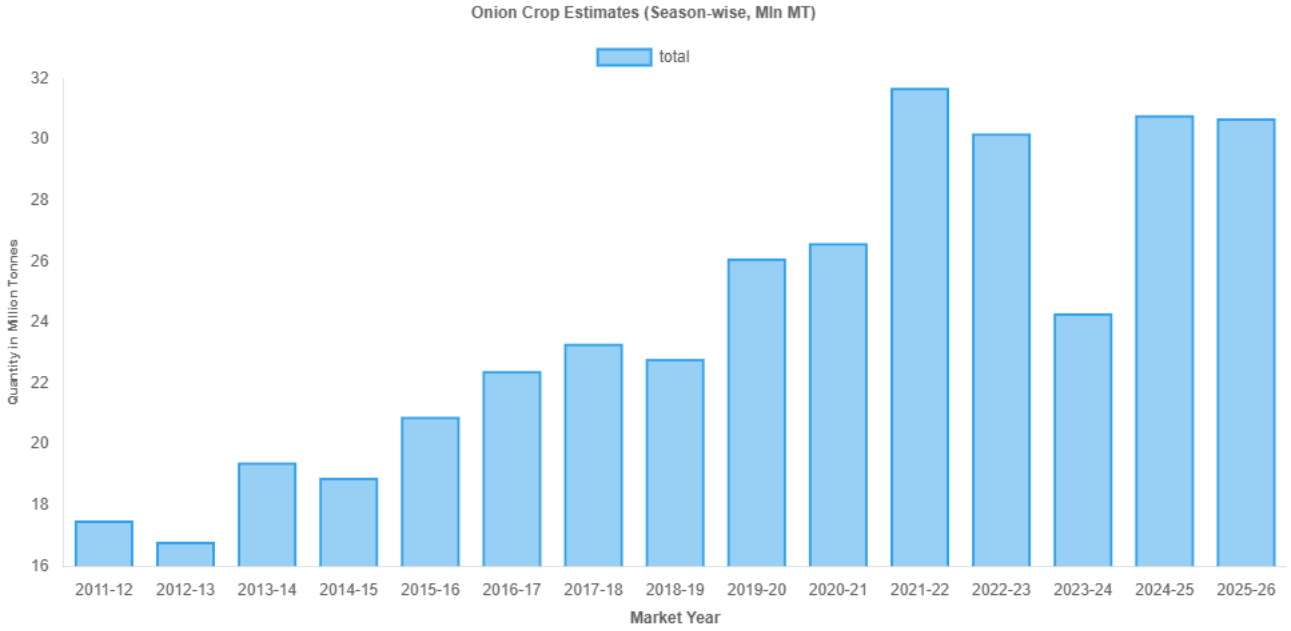

Arrivals

Onion arrivals in the current month are at 708.2 thousand tonnes till 17th Oct, compared with 1395.6 thousand tonnes recorded in the previous month (Sept 2026).

Note: Avg, Min, Max corresponds to previous 5 marketing years; source: Agmarknet

India's Production Advance Estimates

Tomato

- **Tomato WPI Deflation Eases to -14.56% in September 2026:** India's tomato wholesale price inflation improved to -14.56% in September 2026, compared with -40.2% in August, according to the Ministry of Commerce & Industry. Retail price inflation also moderated, with CPI inflation improving to -8.63% from -31.09% over the same period. The WPI index edged up from 99.5 in August to 99.2 in September, while the CPI index increased from 96.49 to 98.41, indicating relatively stable price levels despite negative year-on-year inflation. The narrowing gap between wholesale and retail indices suggests greater alignment in price movements. However, prices remain below year-earlier levels, and the easing of deflation does not necessarily confirm a sustained market recovery. (Source: Ministry of Commerce & Industry)
- **Tomato Arrivals Reach 1,71,100 Tonnes by October 10, Remain Below Historical Average:** India's tomato arrivals stood at 1,71,100 tonnes till October 10, 2026, compared with 5,66,400 tonnes in September, indicating that October supplies are still building up. As the current figure covers only the first ten days, it should not be directly compared with the full-month September volume. The chart shows October's five-year average at around 7,20,000 tonnes, while the five-year minimum is approximately 2,80,000 tonnes, placing current arrivals below normal seasonal levels. Tomato arrivals remained below 2025 levels during most months of 2026, although September supplies were stronger than the five-year average. If arrivals continue to lag behind historical norms, market availability could tighten and price volatility may increase in the coming weeks.

Wholesale Price Index

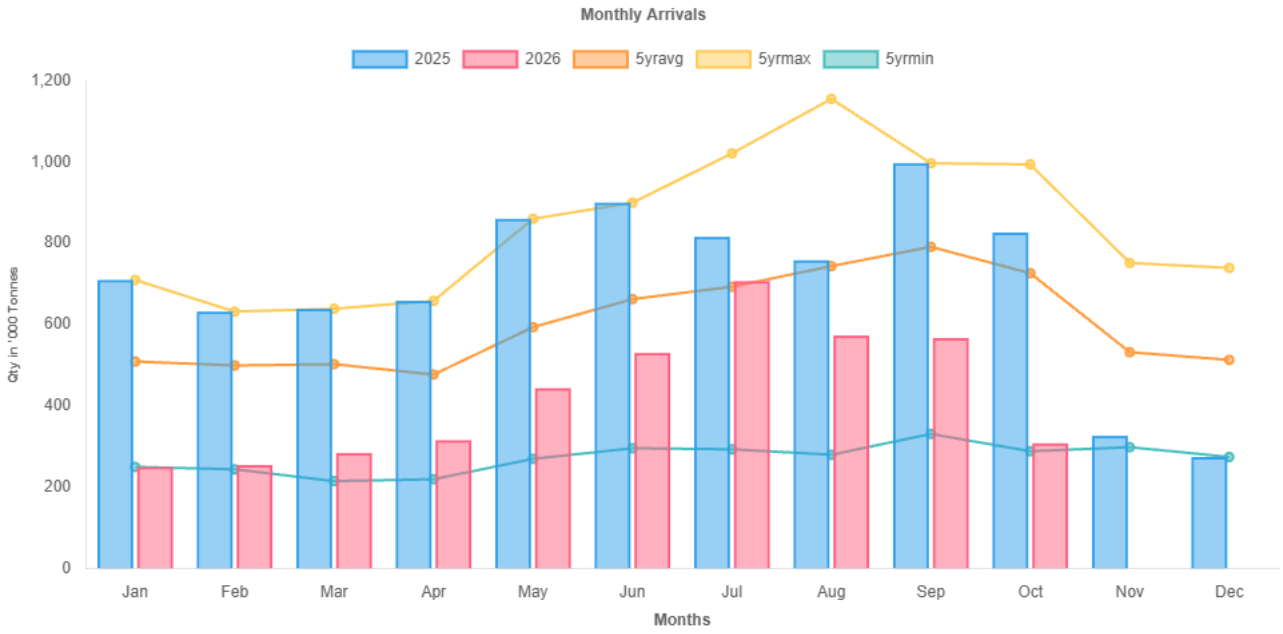

According to the Ministry of Commerce & Industry, the annual rate of inflation of Tomato, based on the monthly Wholesale Price Index (WPI), stood at -14.56% for the month of Sept 2026, as compared to -22.34% for the corresponding month of the previous year.

Ministry of Commerce &Industry

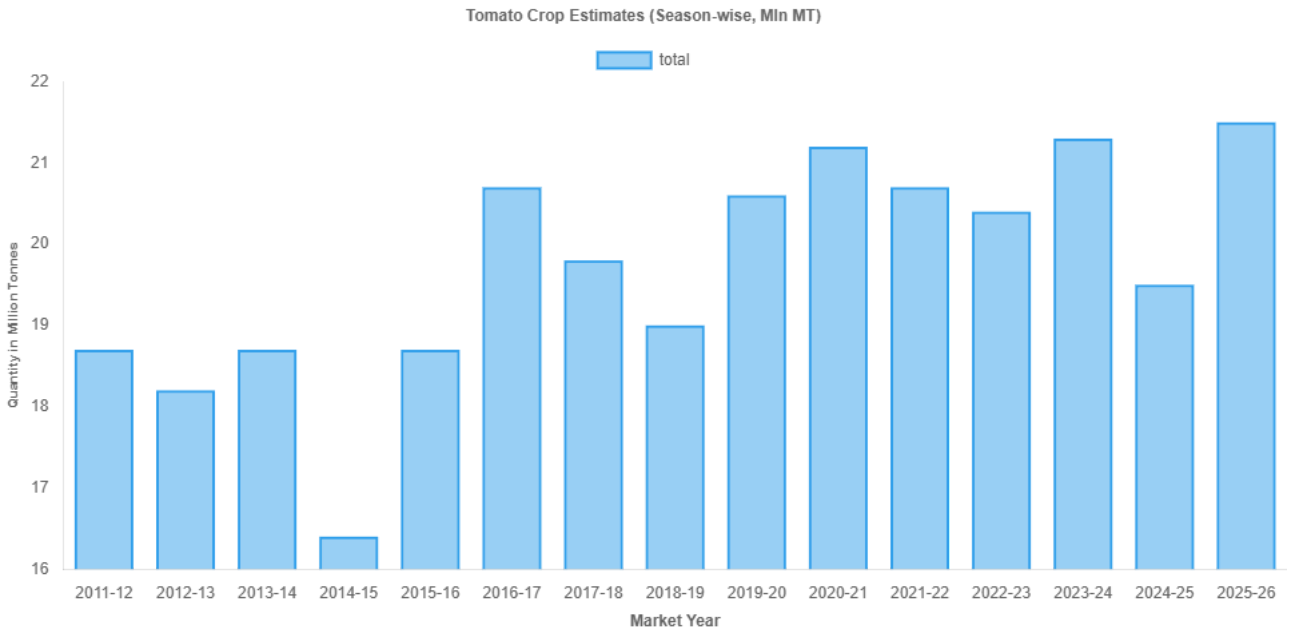

Arrivals

Tomato arrivals in the current month are at 307.2 thousand tonnes till 17th Oct, compared with 566.4 thousand tonnes recorded in the previous month (Sept 2026).

Note: Avg, Min, Max corresponds to previous 5 marketing years; source: Agmarknet

India's Production Advance Estimates

Potato

- **Potato WPI Deflation Eases to 22.77% in September 2026:** India's potato wholesale price inflation stood at -22.77% in September 2026, improving from -41.92% in September 2025, according to the Ministry of Commerce & Industry. The Wholesale Price Index (WPI) reached 71.9, while the Consumer Price Index (CPI) stood at 70.61, with retail inflation at -11.51% year-on-year. Potato prices have recovered from their April 2026 lows, when the WPI fell to 56.1, supported by the transition from fresh Rabi harvest arrivals to cold-storage supplies. Although annual inflation remains negative, the narrowing deflation indicates a gradual recovery in price levels. The trend suggests that the period of sharp price declines may be easing, while storage costs and seasonal supply changes could influence prices in the coming months. (Source: Ministry of Commerce & Industry)
- **Potato Arrivals Reach 5,10,000 Tonnes by October 10, Remain Below Historical Average:** India's potato arrivals stood at 5,10,000 tonnes till October 10, 2026, compared with 13,68,200 tonnes in September. As the current figure covers only the first ten days, it should not be directly compared with the full-month September volume. October's five-year average is approximately 20,00,000 tonnes, while the five-year minimum is around 5,00,000 tonnes, indicating that arrivals remain substantially below normal seasonal levels but are close to the historical minimum. Potato arrivals have remained significantly below 2025 levels throughout most of 2026, reflecting persistent weakness in market inflows. If supplies continue below historical averages, market availability could tighten further, potentially increasing price volatility during the coming months.
