Onion

- **Onion WPI Inflation Surges to 191.33% as Retail Inflation Crosses 100%:** India's onion wholesale price inflation surged to 191.33% in September 2026, compared with -65.18% in September 2025, according to the Ministry of Commerce & Industry. The Wholesale Price Index (WPI) rose to 289.0, while the Consumer Price Index (CPI) reached 142.88, registering retail inflation of 108.10% year-on-year. The sharp reversal followed a prolonged period of price deflation during 2025 and early 2026, with wholesale inflation turning positive in June before accelerating sharply in the third quarter. The widening price surge indicates mounting pressure across wholesale and retail markets. Continued supply constraints could further increase procurement costs, strain trader working capital and reduce consumer purchasing power. (Source: Ministry of Commerce & Industry)
- **Onion Arrivals Reach 9.31 Lakh Tonnes by October 24, Down 33% Year-on-Year:** India's onion arrivals stood at 9,31,200 tonnes till October 24, 2026, compared with 13,95,600 tonnes in September, indicating that October supplies remain below the previous month's full-month volume. Current arrivals are approximately 58% below October 2025 levels of 26,99,300 tonnes and nearly 58% below the five-year average of 22,03,100 tonnes. However, October arrivals remain above the five-year minimum of 6,82,200 tonnes, suggesting that supplies have not reached historical lows. The persistent shortfall in market inflows reflects continued weakness in onion availability during the seasonal transition. If arrivals remain below historical norms, supply tightness could intensify and contribute to price volatility in the coming weeks.

Wholesale Price Index

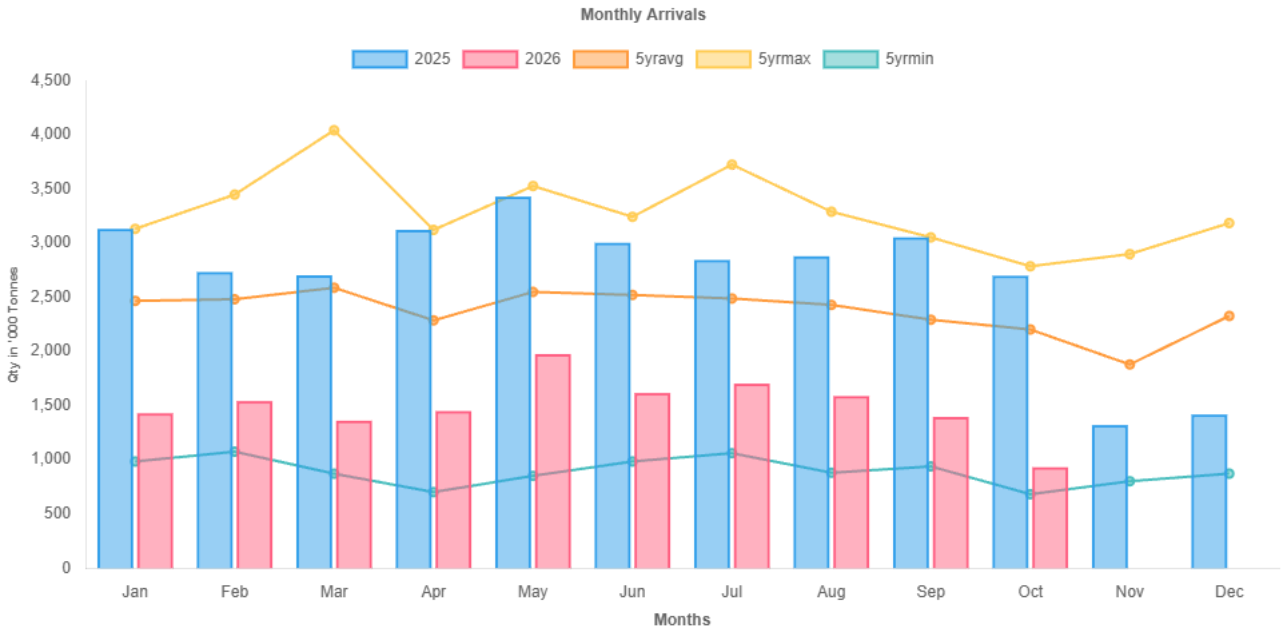

According to the Ministry of Commerce & Industry, the annual rate of inflation of Onion, based on the monthly Wholesale Price Index (WPI), stood at 191.33% for the month of Sept 2026, as compared to -65.18% for the corresponding month of the previous year.

Ministry of Commerce &Industry

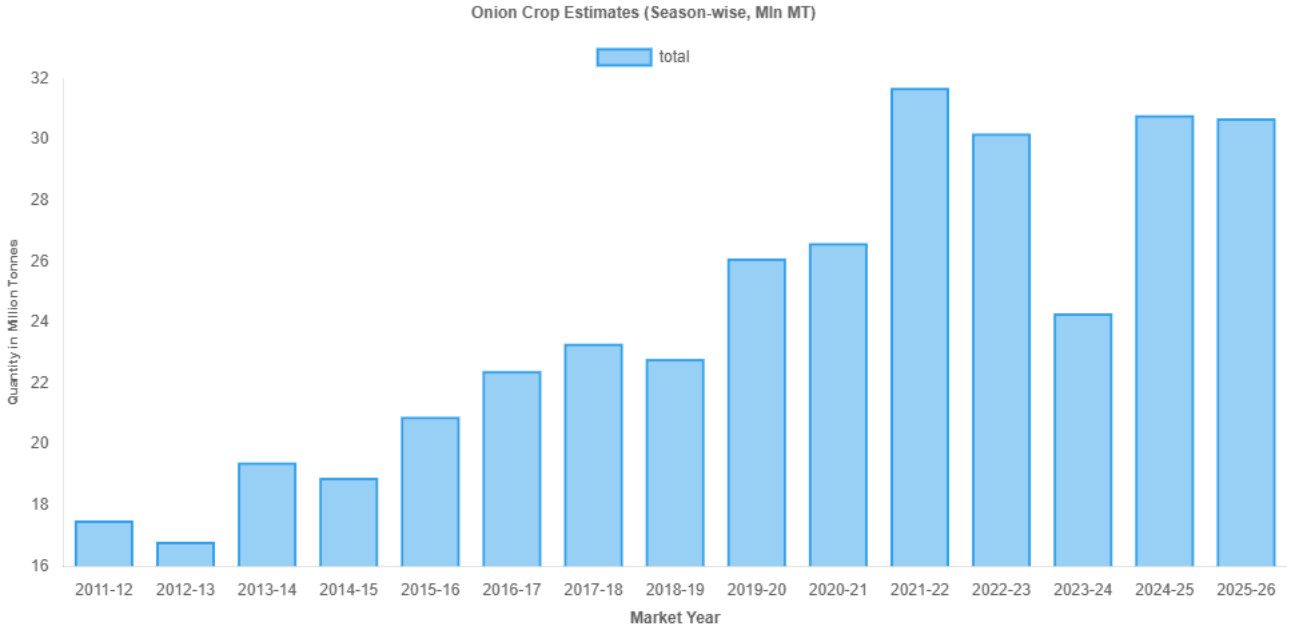

Arrivals

Onion arrivals in the current month are at 931.2 thousand tonnes till 24th Oct, compared with 1395.6 thousand tonnes recorded in the previous month (Sept 2026).

Note: Avg, Min, Max corresponds to previous 5 marketing years; source: Agmarknet

India's Production Advance Estimates

Tomato

- **Tomato WPI Deflation Eases to -14.56% in September 2026:** India's tomato wholesale price inflation improved to -14.56% in September 2026, compared with -40.2% in August, according to the Ministry of Commerce & Industry. Retail price inflation also moderated, with CPI inflation improving to -8.63% from -31.09% over the same period. The WPI index edged up from 99.5 in August to 99.2 in September, while the CPI index increased from 96.49 to 98.41, indicating relatively stable price levels despite negative year-on-year inflation. The narrowing gap between wholesale and retail indices suggests greater alignment in price movements. However, prices remain below year-earlier levels, and the easing of deflation does not necessarily confirm a sustained market recovery. (Source: Ministry of Commerce & Industry)
- **Tomato Arrivals Reach 4.21 Lakh Tonnes by October 24, Remain Below Historical Average:** India's tomato arrivals stood at 4,20,700 tonnes till October 24, 2026, compared with 5,66,400 tonnes in September. October arrivals are approximately 49% lower than the 8,26,200 tonnes recorded in October 2025 and around 42% below the five-year average of 7,26,000 tonnes. However, current arrivals remain above the five-year minimum of 2,87,700 tonnes, indicating that supplies have not reached historical lows. The 2026 trend shows a recovery from the first-quarter lows, followed by declining arrivals in August, September and October. Continued weakness against historical benchmarks could tighten market availability and increase price volatility. However, the direction of prices will also depend on fresh arrivals and regional supply conditions over the coming weeks.

Wholesale Price Index

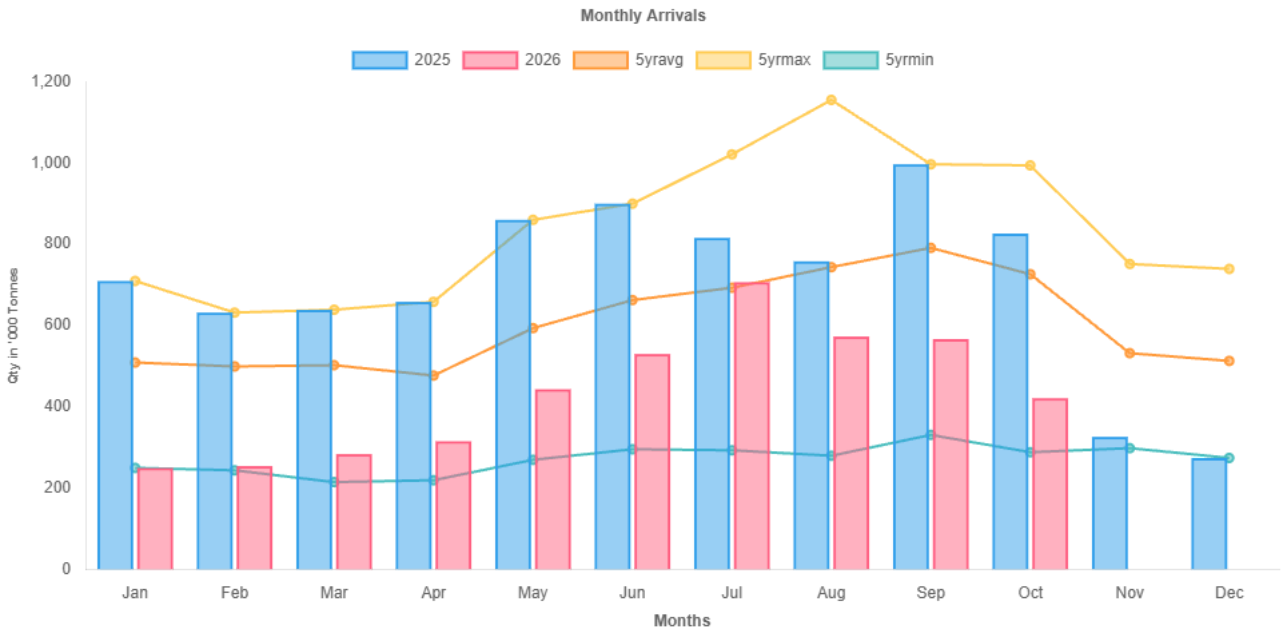

According to the Ministry of Commerce & Industry, the annual rate of inflation of Tomato, based on the monthly Wholesale Price Index (WPI), stood at -14.56% for the month of Sept 2026, as compared to -22.34% for the corresponding month of the previous year.

Ministry of Commerce &Industry

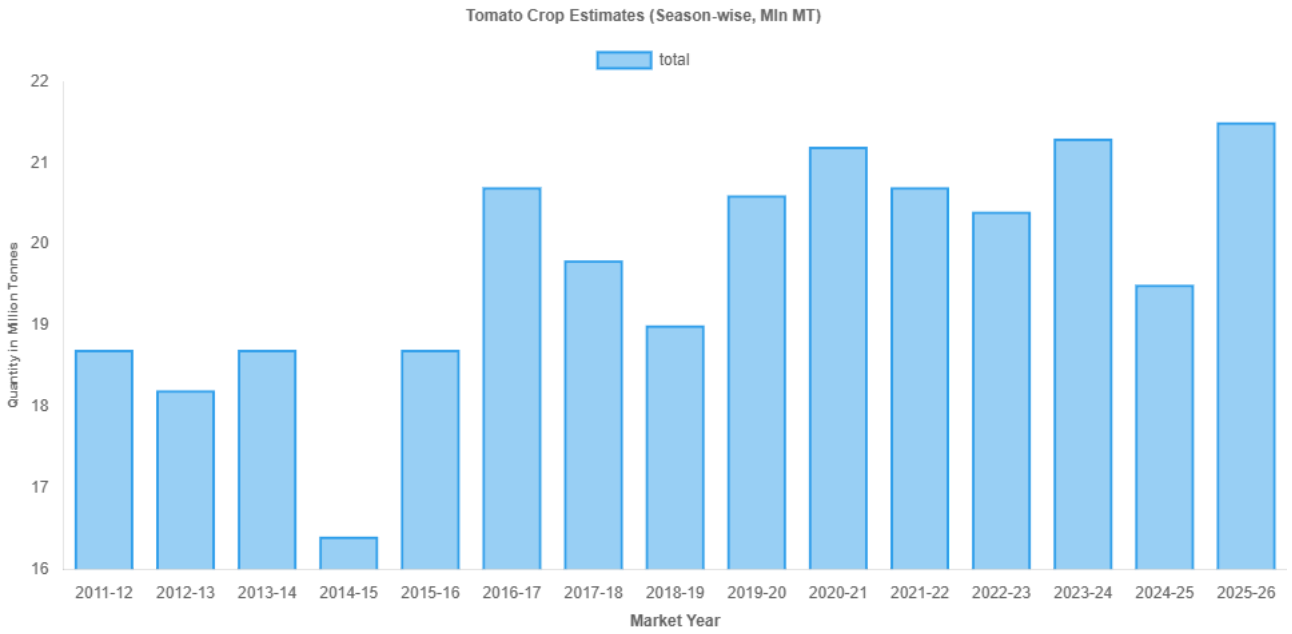

Arrivals

Tomato arrivals in the current month are at 420.7 thousand tonnes till 24th Oct, compared with 566.4 thousand tonnes recorded in the previous month (Sept 2026).

Note: Avg, Min, Max corresponds to previous 5 marketing years; source: Agmarknet

India's Production Advance Estimates

Potato

- **Potato WPI Deflation Eases to 22.77% in September 2026:** India's potato wholesale price inflation stood at -22.77% in September 2026, improving from -41.92% in September 2025, according to the Ministry of Commerce & Industry. The Wholesale Price Index (WPI) reached 71.9, while the Consumer Price Index (CPI) stood at 70.61, with retail inflation at -11.51% year-on-year. Potato prices have recovered from their April 2026 lows, when the WPI fell to 56.1, supported by the transition from fresh Rabi harvest arrivals to cold-storage supplies. Although annual inflation remains negative, the narrowing deflation indicates a gradual recovery in price levels. The trend suggests that the period of sharp price declines may be easing, while storage costs and seasonal supply changes could influence prices in the coming months. (Source: Ministry of Commerce & Industry)
- **Potato Arrivals Reach 11.70 Lakh Tonnes by October 24, Down 57.5% Year-on-Year:** India's potato arrivals stood at 11,69,800 tonnes till October 24, 2026, compared with 13,68,200 tonnes in September. October arrivals are approximately 57.5% below the 27,50,700 tonnes recorded in October 2025 and 42.7% below the five-year average of 20,40,700 tonnes. However, current arrivals remain above the five-year minimum of 4,91,000 tonnes, indicating that supplies have not reached historical lows. The 2026 trend shows consistently lower arrivals than last year, reflecting persistent weakness in market inflows. Although October arrivals have already exceeded the five-year minimum, the substantial gap against historical averages indicates limited supply strength. Continued underperformance could affect market availability and increase price volatility during the final quarter.
