Domestic News

- **Rice prices are steady across most markets. The Delhi (Basmati) market price is quoted at ₹1,09,000/Tonne, up by ₹2000.**
- **India Focuses on Rice Value Addition and Processed Exports to Strengthen Global Competitiveness:** India is shifting its rice sector from production-led growth towards value addition, processing, quality certification, traceability and sustainability, according to the Food Processing Industries Ministry. India accounts for nearly 40% of global rice trade, creating opportunities to expand value-added exports and strengthen its position in international markets. The government is prioritising processing infrastructure, research, innovation and domestic manufacturing of machinery and technology for the rice value chain. Greater integration between agriculture and food processing is also expected to support employment, rural development and higher farmer incomes, while trade agreements could improve access to global markets and advanced technologies.
- **Indian Rice Export Prices Reach Over One-Year High Amid Stronger Rupee and Tight Supply:** Indian rice export prices rose to their highest levels in more than a year, supported by rupee appreciation and tight supplies. The 5% broken parboiled variety was quoted at USD 387–392/tonne, up from USD 384–389/tonne a week earlier, while 5% broken white rice was priced at USD 389–394/tonne. Below-normal rainfall during the crop maturation period is raising concerns over India's rice production, with industry estimates pointing to a possible annual decline. Meanwhile, Vietnam's 5% broken rice remained at USD 440–450/tonne and Thailand's at USD 480/tonne. Demand from the Philippines is supporting regional trade, while elevated rice prices in Bangladesh are adding to consumer cost pressures. (Source: Deccan Herald)
- **Haryana Paddy Procurement Slows as Delayed Lifting Creates Storage Constraints:** Paddy procurement in Haryana's Karnal district reached 346,000 tonnes out of total arrivals of 478,000 tonnes as of October 22, 2026, while only 224,000 tonnes had been lifted, leaving around 122,000 tonnes awaiting removal. On October 22, arrivals reached 34,817 tonnes, but procurement stood at just 6,049 tonnes. Payments of ₹500.1 crore had been released to 28,795 farmers. In Kurukshetra district, total procurement reached 138,400 tonnes, including 102,700 tonnes by the Food and Supplies Department and 35,600 tonnes by HAFED. Meanwhile, Bhadohi district in Uttar Pradesh has set a paddy procurement target of 28,500 tonnes through 28 centres from November 1, with MSPs of ₹2,441 per quintal for common paddy and ₹2,461 for Grade A.

International News

- **Rough Rice CBOT (Nov 26) closed at 17.4 USD/CWT, up by 10 cents;**
- **Mozambique Seeks India Partnership to Expand Agro-Processing and Rice Trade:** Mozambique is seeking stronger agricultural cooperation with India to develop agro-processing, adopt agricultural technologies, and expand rice trade across Southern Africa. The country imports around 600,000 tonnes of rice annually, with most supplies sourced from India. Mozambique also aims to use its strategic ports to improve access to regional markets, including landlocked countries, creating opportunities for Indian businesses to expand trade and processing operations. Greater cooperation is expected to support Mozambique's food security and strengthen agricultural trade links between India and Southern Africa (Source: Business Line)
- **Indonesia's Rice Production May Decline 0.2% in 2026 Despite Large Reserve Stocks:** Indonesia's rice production could decline by around 80,000 tonnes, or 0.2%, in 2026, following a strong increase in the previous year. Statistics Indonesia projected production for January–July 2026 to be 80,000 tonnes lower year-on-year. Despite the expected decline, the country's rice surplus from the previous year is expected to help maintain overall supply. Rice reserves in government warehouses stood at 5.17 MMT as of June 23, 2026, including domestically produced rice and carryover stocks. Concerns have also been raised over ageing and discoloured rice stocks, prompting calls for faster distribution and improved stock management.
- **Thailand Prepares for Potentially Exceptional El Niño Peak in December 2026:** The World Meteorological Organization (WMO) warned that El Niño could intensify towards December 2026, with sea-surface temperature anomalies in the Niño 3.4 region potentially reaching 3.8°C above average during November 2026–January 2027. Thailand and other Southeast Asian countries face increased risks of heat, rainfall deficits, agricultural drought, and wildfires, potentially affecting crop yields and water availability. The Food and Agriculture Organization (FAO) has identified Thailand among the countries vulnerable to El Niño-related agricultural drought, with some exposed areas facing drought probabilities above 50%. The 2015–16 El Niño was associated with an estimated 15.0 MMT decline in Southeast Asian rice production, highlighting potential risks to regional food supplies and prices. WMO forecasts indicate El Niño conditions are likely to persist through February 2027, with agricultural and weather impacts potentially continuing beyond the peak. (Source: The Nation)
