Domestic News

- **Rice prices are mixed across most markets. The Delhi (Basmati) market price is quoted at ₹1,10,000/Tonne, up by ₹1000.**
- **Chhattisgarh to Begin Kharif Paddy Procurement on November 15 at ₹3,100 per Quintal:** Chhattisgarh will begin paddy procurement for the 2026–27 Kharif marketing season on November 15, offering ₹3,100 per quintal for up to 21 quintals per acre from more than 2.75 million registered farmers. The Centre has set a target of 7.3 MMT of rice from Chhattisgarh for the central pool.
- **Old Paddy Prices Hit Record ₹5,000 per Quintal in Telangana's Warangal Amid Supply Concerns:** Prices of one-year-old fine-quality paddy in Telangana's Warangal region have reached a record ₹5,000 per quintal, up from ₹4,000, amid concerns over reduced paddy cultivation linked to El Niño. Private traders are offering around ₹3,700 per quintal for fresh fine-variety paddy, approximately ₹800 above the government's combined MSP and state bonus of ₹2,900 per quintal, and are accepting moisture levels of up to 20%, compared with the government procurement limit of 14%. Traders are reportedly stocking paddy in anticipation of next-season demand. The higher prices have also pushed fine rice retail prices from ₹60 to ₹95 per kg, raising affordability concerns.
- **Odisha's Sundargarh Paddy Crops Face Moisture Stress as Farmers Await Cyclone-Linked Rainfall:** Paddy crops across non-irrigated areas of Odisha's Sundargarh district are facing moisture stress after nearly a month without rainfall, raising concerns over yields and potential crop damage. Paddy cultivation covers 198,400 hectares in the district, with medium-land crops at flowering, milking, and maturity stages particularly vulnerable due to limited irrigation, while lowland crops retain adequate soil moisture. The district recorded rainfall deficits of 41 mm in September after surplus rainfall in July and August. Farmers are hoping Cyclone Arnab will bring timely rain to support crop development and prevent further losses.
- **Hailstorms Damage Over 12,000 Acres of Paddy in Haryana's Fatehabad District:** Hailstorms, heavy rain, and strong winds have damaged paddy crops across more than 25 villages in the Ratia subdivision of Haryana's Fatehabad district, affecting over 12,000 acres. Preliminary administrative estimates indicate damage of 61–80% across 4,500 acres, while another 2,750 acres suffered 40–60% losses. Severe damage was reported in Dadupur, Hardauli and Jallopur, with losses estimated at 75–80% in some areas. The preliminary assessment has been submitted to the state government, and farmers are awaiting the opening of the crop-damage registration portal for field verification and compensation decisions.
- **Punjab's Paddy Procurement Faces Severe Storage Bottleneck as Grain Stocks Exceed Capacity:** Punjab is facing a major storage crisis during the 2026–27 Kharif procurement season, with 265 LMT of foodgrains against total storage capacity of 249 LMT. The state holds around 150 LMT of rice and 115 LMT of wheat, while slow grain movement and pending deliveries of 3 LMT of rice from the previous season are delaying milling and acceptance of fresh paddy. The Centre has set a procurement target of 180 LMT of paddy, expected to yield around 120 LMT of rice, compared with 156 LMT procured last year. The Food Corporation of India is moving around 5 LMT of rice monthly against the state's request for 12 LMT, intensifying pressure on mills and mandis. Punjab is seeking faster rail transportation and additional storage capacity to manage incoming supplies.

International News

- **Rough Rice CBOT (Nov 26) closed at 17.3 USD/CWT, up by 20 cents;**
- **Nepal's Chitwan Rice Zone Expects Paddy Production to Rise by 5,000 Tonnes in 2026/27:** Paddy production in Nepal's designated Chitwan rice zone is projected to increase to 50,000 tonnes in fiscal year 2026/27, up from 45,000 tonnes last year, based on crop-cutting assessments. The zone produced last year's crop across 8,500 hectares and covers parts of Ratnanagar, Khairahani, and Rapti municipalities in eastern Chitwan. An assessment of total paddy production across Chitwan district is still underway.
- **USDA Forecasts Philippines to Remain World's Largest Rice Importer at 5.5 MMT in 2026:** The Philippines is forecast to remain the world's largest rice importer, with imports projected at 5.5 MMT in 2026, according to the USDA, as rising consumer demand and weather-related disruptions constrain domestic supplies. The country produced 9.03 MMT of unmilled rice in the first half of 2026, including 4.63 MMT in the second quarter, up 5.7% year-on-year. However, third-quarter production is projected to decline 17.2% to 3.1 MMT amid El Niño and storm impacts. The government continues to use imports to bridge supply gaps while adjusting shipment timing to limit harvest-season price pressure on farmers.
- **Bangladesh's Rangpur Region Expects Bumper Aman Rice Harvest Despite Below-Average Rainfall:** Farmers in Bangladesh's Rangpur agricultural region are expecting a bumper Aman rice harvest in 2026, supported by adequate soil moisture, intermittent rainfall, and supplementary irrigation despite below-average monsoon precipitation. Aman paddy was planted across 621,690 hectares, exceeding the regional target by 140 hectares, with clean rice production targeted at 2.0 MMT from 3.0 MMT of paddy. Harvesting of short-duration Aman rice has covered 20,436 hectares, producing 64,973 tonnes of clean rice, equivalent to 97,460 tonnes of paddy. Harvesting is expected to gain momentum next month, with favorable market prices further supporting farmers.
