Maize Daily Digest

13 May 2026

Executive Summary

- **Maize prices remained steady to firm in most markets throughout the day. The price of Gulabbagh market is quoted at 20200 INR/Tonne, down by 200 INR.**
- **Government Raises Maize MSP for Kharif 2026-27, Supporting Price Outlook.**
- **Storms and Rain Damage Maize Crop Across Uttar Pradesh and Bihar.**
- **Andhra Pradesh Exports 53,318 Tonnes of Maize to Vietnam.**
- **Maize Cultivation Expands Rapidly in Uttar Pradesh's Hathras District.**
- **CBOT: Corn Jul 2026 is up by 4.2 cents, quoted at 478.6 c/bu.**
- **Kenya's Trade Deficit Rises on Higher Maize Imports.**
- **Cameroon Suspends Maize Imports to Support Local Farmers.**
- **USDA Keeps Corn Use for Ethanol Stable for 2026-27.**

Domestic News

- **Maize prices remained steady to firm in most markets throughout the day. The price of Gulabbagh market is quoted at 20200 INR/Tonne, down by 200 INR.**
- **Government Raises Maize MSP for Kharif 2026-27, Supporting Price Outlook:** The India government has increased the minimum support price (MSP) of maize for the 2026-27 kharif marketing season by ₹10 per quintal to ₹2,410 per quintal. The revised MSP was approved to provide better returns to farmers and support maize cultivation amid rising industrial demand. According to official estimates, maize production cost stands at ₹1,544 per quintal, offering farmers an expected margin of nearly 56% over cost. Industry observers said the MSP hike, along with growing demand from the ethanol, poultry feed and starch sectors, could support maize prices and encourage higher acreage during the upcoming kharif season. Since 2013-14, maize MSP has increased by ₹1,100 per quintal, reflecting an overall rise of around 84% under the government's price support policy. (Source: Print Media)
- **Storms and Rain Damage Maize Crop Across Uttar Pradesh and Bihar:** Unseasonal storms, heavy rain and hailstorms caused major damage to standing maize crops in parts of Uttar Pradesh and Bihar, raising concerns over crop losses and farmer incomes. In Sambhal district, strong winds of nearly 50 km per hour flattened maize fields and disrupted electricity supply after trees and branches fell on power lines. Similar weather conditions in West Champaran district's Majhaulia block in Bihar severely damaged ready-to-harvest maize crops, with hailstorms and strong winds lodging large areas of fields. Farmers said vegetable and pulse crops were also affected, increasing fears of heavy financial losses. (Source: Bhaskar)
- **Andhra Pradesh Exports 53,318 Tonnes of Maize to Vietnam:** Nellore district exported 53,318 tonnes of maize to Vietnam through Krishnapatnam Port to support better market opportunities and higher returns for farmers. The shipment was flagged off from the port as part of efforts to manage the district's strong maize production this season. District authorities said the export initiative was aimed at helping farmers secure remunerative prices by expanding access to international markets. Officials added that coordination between the administration and agriculture department helped facilitate the export process smoothly. The development is expected to strengthen overseas demand for Indian maize and improve farmer incomes in the region. (Source: The Hindi)
- **Maize Cultivation Expands Rapidly in Uttar Pradesh's Hathras District:** Maize cultivation is witnessing strong expansion in Hathras, with the crop emerging as a profitable alternative for farmers between the rabi and kharif seasons. Agriculture Department data showed maize acreage in the district increased nearly eightfold over the past four years, rising from 2,145 hectares in 2023 to 17,105 hectares in 2026. Farmers are increasingly shifting towards maize due to its short crop duration, lower irrigation requirement and better market demand. Market arrivals in local mandis also increased sharply from 1,00,000 quintals in 2023 to nearly 5,00,000 quintals in 2025. Traders from Punjab, Haryana and Rajasthan are reportedly purchasing maize from the district because of its quality and sweetness. Farmers said the crop is becoming a reliable source of income as it matures within 75–85 days and provides attractive returns with relatively lower cultivation costs. (Source: Amar Ujala)

International News

- **CBOT: Corn Jul 2026 is up by 4.2 cents, quoted at 478.6 c/bu.**
- **Kenya's Trade Deficit Rises on Higher Maize Imports:** Kenya's trade deficit widened to nearly Sh1.6 trillion in 2025, mainly due to higher maize imports and rising food import costs. Import expenditure increased to around Sh2.8 trillion as the country imported more maize to support domestic supply amid production challenges. Analysts said growing dependence on imported maize is increasing pressure on Kenya's trade balance and highlighting concerns over food security and local grain production.
- **Cameroon Suspends Maize Imports to Support Local Farmers:** Cameroon has suspended maize import permits to protect domestic farmers and stabilize the local grain market. The government stopped issuing new import authorizations after concerns that rising maize imports were depressing local prices and hurting farmer profitability. Officials said excessive imports had saturated the market, making it difficult for local growers to sell their produce. Cameroon produces around 22,00,000 tonnes of maize annually against domestic demand of nearly 28,00,000 tonnes. Authorities stated that the temporary restriction aims to give farmers better market opportunities while supporting local agricultural production and reducing dependence on imports.
- **USDA Keeps Corn Use for Ethanol Stable for 2026-27:** The USDA's May WASDE report projected that 5.6 billion bushels of corn will be used for ethanol production during the 2026-27 marketing year, unchanged from the estimated usage for 2025-26. However, the agency lowered its outlook for US corn production and ending stocks while raising the projected average farm price to $4.40 per bushel. US corn production for 2026-27 is forecast at 16 billion bushels, down 6% from the previous year due to lower planted area and reduced yields. Corn exports are also expected to decline by 5% to 3.2 billion bushels amid rising competition from Brazil and Ukraine. Globally, corn production is projected to fall to 1.295 billion tonnes, while consumption is expected to reach a record 1.315 billion tonnes, tightening global stocks to their lowest level since 2013-14.
