Maize Daily Digest

14 May 2026

Executive Summary

- **Maize prices remained steady to firm in most markets throughout the day. The price of Gulabbagh market is quoted at 20250 INR/Tonne, up by 50 INR.**
- **Maize Sowing Picks Up in Himachal Pradesh Amid Higher Seed Prices.**
- **India Records Above-Normal Pre-Monsoon Rainfall, Supporting Maize Crop.**
- **CBOT: Corn Jul 2026 is up by 1.8 cents, quoted at 480.4 c/bu.**
- **Corn Prices Weaken Despite Strong Ethanol Production Data.**
- **Brazil's Corn Production May Surpass Soybean Output in Future.**

Maize Daily Digest

14 May 2026

Domestic News

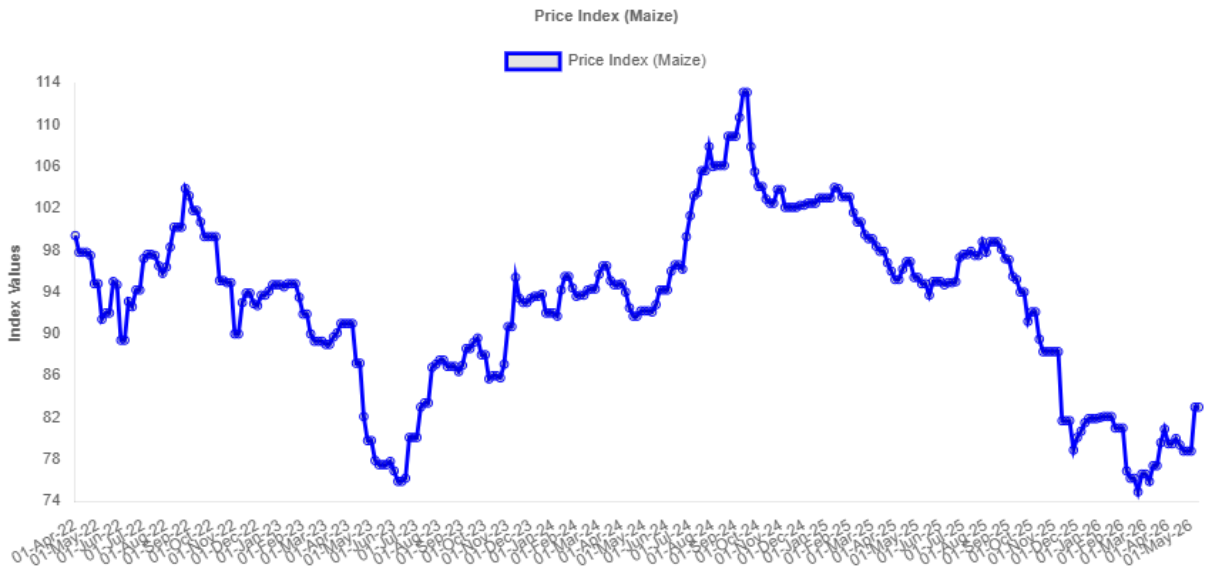

- **Maize prices remained steady to firm in most markets throughout the day. The price of Gulabbagh market is quoted at 20250 INR/Tonne, up by 50 INR.**
- **Maize Sowing Picks Up in Himachal Pradesh Amid Higher Seed Prices:** Maize sowing has gained momentum in irrigated areas of Una for the kharif season, while rain-fed regions are still waiting for rainfall. Farmers said subsidized maize seeds are yet to reach the market, forcing them to buy private seeds at ₹1,000–₹2,000 per five-kilogram packet, around ₹300–₹400 higher than usual rates. Rising seed, fertilizer and labor costs have increased cultivation expenses, though officials said efforts are being made to supply certified seeds soon. (Source- Amar Ujala)
- **India Records Above-Normal Pre-Monsoon Rainfall, Supporting Maize Crop:** India has received above-normal pre-monsoon rainfall this season, improving moisture conditions for summer maize cultivation in several regions. According to the India Meteorological Department (IMD), cumulative rainfall from March 1 to May 13, 2026 reached 96 mm against the normal 92.1 mm, registering a 4% surplus over the Long Period Average (LPA). Central India recorded 32% above-normal rainfall, while East and Northeast India received 9% excess rainfall. The improved moisture availability is expected to support maize sowing and crop growth, particularly in rain-fed regions. However, experts warned that excessive rainfall and strong winds in some areas could also increase the risk of waterlogging and lodging in standing maize crops.

International News

- **CBOT: Corn Jul 2026 is up by 1.8 cents, quoted at 480.4 c/bu.**
- **Corn Prices Weaken Despite Strong Ethanol Production Data:** Global corn prices moved lower on Thursday morning, with major futures contracts declining by 6–7 cents amid improving crop outlooks in South America and expectations of favorable rainfall across the US Corn Belt. December 2026 corn futures slipped around 6.5 cents after closing above $5 per bushel in the previous session. Market pressure increased after the Rosario Grains Exchange raised Argentina's corn crop estimate to 68 million tonnes. Weather forecasts also indicated 1–3 inches of rainfall across major US growing regions, supporting crop development prospects. However, ethanol sector demand remained supportive as US weekly ethanol production rose to 10,82,000 barrels per day, while ethanol stocks declined sharply. Analysts said passage of the year-round E15 fuel sales bill in the US House could provide longer-term support to corn demand if approved by the Senate. (Source: Barchart)
- **Brazil's Corn Production May Surpass Soybean Output in Future:** Brazil's corn production is expected to witness strong long-term growth and could eventually surpass soybean output as rising corn ethanol demand reshapes the country's grain sector. According to the president of industry group Abramilho, rapid expansion in corn ethanol production is encouraging farmers to increase corn cultivation across multiple growing seasons. Brazil's crop agency Conab currently estimates 2025-26 corn production at 139.6 million tonnes compared to soybean output of 179.2 million tonnes. However, some major producing states, including Mato Grosso, have already reported corn production exceeding soybeans. Industry officials said increasing ethanol demand and export opportunities, particularly from China, are also boosting sorghum cultivation. Analysts believe expanding biofuel production and rising global feed demand could further strengthen Brazil's position in global corn trade in the coming years. (Source: Successful Farming)
