Maize Daily Digest

11 May 2026

Executive Summary

- **Maize prices remained steady to firm in most markets throughout the day. The price of Gulabbagh market is quoted at 20250 INR/Tonne, down by 250 INR.**
- **Maize Emerges as India's Largest Ethanol Feedstock.**
- **Falling Maize Prices Push Khargone Farmers Towards Soybean Cultivation.**
- **CBOT: Corn Jul 2026 is down by 3.8 cents, quoted at 471 c/bu.**
- **Low Maize Prices Reduce Farmers' Earnings in Bangladesh Char Areas.**
- **Corn Market Faces Volatility Ahead of Key Global Events.**
- **Storms and Heavy Rain Damage Maize Crop in Bangladesh's Rangpur Region.**

Domestic News

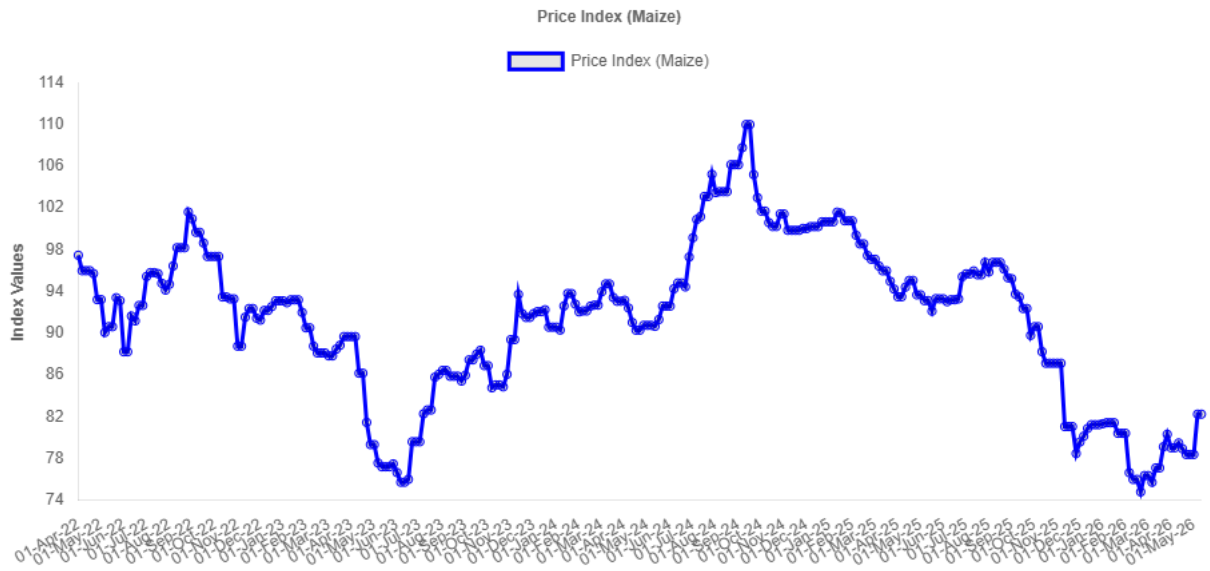

- **Maize Emerges as India's Largest Ethanol Feedstock:** India has witnessed a major shift in its ethanol industry, with maize emerging as the country's largest ethanol feedstock during the first half of Ethanol Supply Year (ESY) 2025-26. Industry estimates showed cumulative ethanol supplies reached nearly 515 crore liters during the first six months, achieving around 49% of the contracted 1,059 crore liters. Maize-based distilleries contributed about 182 crore liters, surpassing all other feedstocks and highlighting growing dependence on grain-based ethanol production. Industry experts said maize offers year-round availability, lower water usage and better long-term scalability for higher ethanol blending targets beyond E20. The trend is expected to boost investments in grain storage, ethanol plants and rural supply chains, while strengthening farmer incomes and supporting India's clean energy and biofuel expansion plans.
- **Falling Maize Prices Push Khargone Farmers Towards Soybean Cultivation:** Farmers in Khargone are shifting away from maize cultivation and increasingly returning to soybean farming ahead of the 2026 kharif season. The trend is mainly driven by falling maize prices and higher support prices for soybean, making soybean cultivation more attractive for growers. Agriculture Department data showed maize sowing area in the district is expected to decline by around 13,000 hectares to 75,000 hectares this year, while soybean acreage is projected to increase by nearly 8,500 hectares. Farmers said maize and cotton had become more profitable in recent years, but weak maize prices have reduced returns. Authorities are also promoting pigeon pea cultivation, while fertilizer stocks and seed supplies have been arranged ahead of the monsoon sowing season expected after 20 June.

International News

- **Low Maize Prices Reduce Farmers' Earnings in Bangladesh Char Areas:** Maize farmers in the char regions of Bangladesh are facing shrinking profit margins due to weak market prices and rising cultivation costs. Despite expanded maize cultivation across the Rangpur region, growers reported that higher expenses on seeds, fertilisers, diesel and labour increased production costs by Tk 2,000–2,500 per bigha this season. Farmers expected maize prices of Tk 31–32 per kg, but current market rates have fallen to around Tk 27–28 per kg, forcing many to store produce in hopes of better prices. Lower yields caused by untimely storms and hail also affected production in several char areas. Agricultural officials said maize remains the most important cash crop in the region's riverine economy, though weak feed mill demand and high supply continue to pressure prices.
- **Corn Market Faces Volatility Ahead of Key Global Events:** Global corn markets are expected to witness sharp price movements this week as traders closely track major policy decisions, geopolitical developments and fresh USDA data. Strong domestic and export demand, along with fund buying and higher energy prices linked to Middle East tensions, recently pushed December 2026 corn futures near the key $5 per bushel level. Market analysts said upcoming events, including the USDA WASDE report, the US Congress vote on year-round E15 ethanol policy and the Trump-Xi meeting in Beijing, could significantly influence corn prices. Managed money funds are also maintaining large long positions in corn futures, adding to volatility risks. Analysts warned that while supportive news could lift prices further, any negative developments may trigger sharp corrections, prompting farmers to actively manage pricing and hedging strategies.
- **Storms and Heavy Rain Damage Maize Crop in Bangladesh's Rangpur Region:** Maize farmers across the Rangpur region of Bangladesh are facing severe crop losses after nor 'westers, hailstorms and continuous heavy rainfall damaged standing maize fields over the past two weeks. Large areas of maize crops in districts including Rangpur, Kurigram and Nilphamari were flattened by strong winds and waterlogging, raising concerns over lower yields and financial distress among farmers. Many growers had hoped to recover earlier losses from potato cultivation through maize farming, but extreme weather disrupted those expectations. Farmers who borrowed money for cultivation said they are now worried about loan repayments. According to the Department of Agricultural Extension, maize was cultivated on around 1,26,925 hectares in the region this season, while authorities are preparing lists of affected farmers for possible government assistance.
