Pulses Daily Digest

18 May 2026

Executive Summary

- **Pulses market showed mixed trend, with Chana (Delhi) up by ₹750 at ₹57,750/tonne, Masur (Kanpur) unchanged at ₹67,000/tonne, Tur (Akola) down by ₹500 at ₹82,000/tonne, Urad (Mumbai) up by ₹500 at ₹80,500/tonne, Moong (Jaipur) up by ₹1,000 at ₹73,000/tonne and Yellow Pea (Kanpur) unchanged at ₹43,500/tonne.**
- **Southwest Monsoon Likely To Reach Kerala Early On May 26.**
- **India; El Niño Years Reduced Kharif Crop Output By Over 10%, Study Warns.**
- **Rupee Hits Record Low Amid Crude Oil Surge, Raising Pulse Import Concerns.**
- **Canada (Saskatchewan); Spring Seeding Gains Pace, Pulse Planting Still Behind Average.**

Pulses Daily Digest

18 May 2026

Key Updates

- **Southwest Monsoon Likely To Reach Kerala Early On May 26:** The India Meteorological Department (IMD) has forecast the southwest monsoon to reach Kerala around 26 May 2026, nearly six days earlier than the normal onset date of June 1. If realized, it would be among the earliest monsoon arrivals since 2020. An early monsoon onset may support timely kharif sowing of pulses such as tur and urad along with paddy and oilseeds, improving initial soil moisture conditions across major producing regions. However, IMD has maintained its forecast of below-normal monsoon rainfall at 92% of the Long Period Average (LPA) for June-September due to developing El Niño conditions from July onward. Weather experts warn that uneven rainfall distribution and possible moisture stress during critical crop stages may still pose risks for kharif pulse production despite the early onset. (Source- Financial Express)
- **India; El Niño Years Reduced Kharif Crop Output By Over 10%, Study Warns:** A study by ICAR researchers found that El Niño years caused more than 10% decline in kharif crop output across several Indian states due to weak and uneven monsoon rainfall. The research analysed El Niño years 2002, 2004 and 2009 and highlighted major impacts on paddy, maize, sorghum and pearl millet production. The study noted significant decline in paddy productivity in Andhra Pradesh, Bihar, Chhattisgarh, Madhya Pradesh, Maharashtra, Uttar Pradesh, Jharkhand and Odisha during El Niño years. Researchers warned that similar risks may emerge again in 2026 if El Niño conditions strengthen during the monsoon season. Agricultural experts suggested promoting drought-tolerant crop varieties, efficient water management and weather-based advisory systems to reduce risks for kharif crops, including pulses such as tur and urad, during possible below-normal rainfall conditions.
- **Rupee Hits Record Low Amid Crude Oil Surge, Raising Pulse Import Concerns:** Indian rupee weakened to a record low of 96.13 per US dollar as Brent crude prices surged near $109 per barrel, increasing concerns over inflation, import costs and economic pressure. Rising oil prices and continued foreign capital outflows pushed the rupee down more than 6% so far in 2026. The sharp depreciation of the rupee is considered supportive for domestic pulse prices as imports of tur, urad, masoor and yellow peas become costlier. Trade sources said higher freight, energy and currency costs may reduce import parity and discourage aggressive import deals in the near term. India's merchandise trade deficit widened to $28,380,000,000 in April, while inflation concerns also increased due to higher fuel and import costs. Market participants believe continued currency weakness may support domestic pulse markets if global uncertainty and crude oil volatility persist. (Source- Businessline)
- **Canada (Saskatchewan); Spring Seeding Gains Pace, Pulse Planting Still Behind Average:** Spring seeding activity accelerated in Saskatchewan during the week ended May 11, with total planting progress reaching 16%, up from 3% a week earlier. However, seeding still remains below the five-year average of 28% and the 10-year average of 27%. Pulse crop planting improved, with nearly one-third of intended pea and lentil acreage already seeded, while chickpea planting reached 19%. Southwestern Saskatchewan remained the most advanced region at 34% complete, whereas northeastern areas lagged at only 1%. Rainfall activity remained limited across the province, although soil moisture conditions are still mostly adequate. Trade sources said continued dry and windy weather may gradually reduce moisture reserves and could become important for pulse crop development if rainfall remains below normal in coming weeks.
